PREFACE

At the end of the 2007/08 Agricultural Year, the National Bureau of Statistics (NBS) in collaboration with the Ministries of Agriculture, Food Security and Cooperatives, Livestock and Fisheries Development; Water; Industry and Trade; the Prime Minister's Office, Regional Administration and Local Government (PMO/RALG) and the Office of the Chief Government Statistician, (OCGS), Ministries of Agriculture and Natural Resources; Livestock and Fisheries conducted the Agricultural Sample Census. This is the fourth Agricultural Census to be carried out in Tanzania, the first one was conducted in 1971/72, the second in 1993/94 and 1994/95 (during 1993/94 data on household characteristics and livestock count were collected and data on crop area and production in 1994/95), and the third was conducted in 2002/03.

The census collected detailed data on crop production, crop marketing, crop storage, livestock production, fish farming, and poverty indicators. In addition to this, the census was large in its scope and coverage as it provides data that can be disaggregated at district level and thus, allow comparisons with the 2002/03 National Sample Census of Agriculture. The census covered smallholders in rural areas only and large scale farms. This report presents data disaggregated at regional and district level and it focuses on smallholders crop production and livestock keeping.

The extensive nature of the census in relation to its scope and coverage is a result of the increasing demand for more detailed information to assist in the proper planning of the agricultural sector and in the administrative decentralization of planning to district level. It is hoped that this report will provide new insights for planners, policy makers, researchers and others involved in the agricultural sector in order to improve the prevailing conditions faced by agricultural households in the country.

On behalf of the Government of Tanzania, I wish to express my appreciation for the financial support provided by the development partners, in particular, the Department for International Development (DFID) and the Japanese Government through the Japan International Cooperation Agency (JICA) and others who contributed through the pooled fund mechanism.

My appreciation also goes to all those who in one-way or the other have contributed to the success of the census. In particular, I would also like to mention the enormous effort made by the Planning Group composed of professionals from the Agriculture Statistics Department of the National Bureau of Statistics, Ministry of Agriculture, Food Security and Cooperatives, Ministry of Livestock Development and Fisheries, Ministry of Water and Irrigation, Ministry of Agriculture,

Livestock and Environment, Zanzibar, the Prime Minister's Office, Regional Administration and Local Government, Ministry of Industries, Trade and Marketing and the Office of the Chief Government Statistician, Zanzibar, the Food and Agriculture Organization of the United Nations and the Censuses and Surveys Technical Working Group (CSTWG).

Finally, I would like to extend my sincere gratitude to all the professionals, the consultants, Regional and District Supervisors and field enumerators for their commendable work. Certainly without their dedication, the census would not have been successful.

Dr. Albina A. Chuwa
Director General
National Bureau of Statistics

EXECUTIVE SUMMARY

The executive summary highlights the main survey results obtained during the National Sample Census of Agriculture 2007/08. This report covers small-scale agricultural households in rural areas of Tabora region. Specifically, it covers, among others, important findings in relation to agricultural production, husbandry practices, and crop productivity.

i) Household Characteristics

The number of agricultural households in Tabora region was 288,446. Nzega District had the largest number of agricultural households (79,584 hh) followed by Urambo (62,000 hh), Igunga (57,402 hh), Uyui (50,937 hh) Sikonge (22,514 hh) and Tabora Urban (16,011 hh)

Most of the households (163,699 hh, 56.8%) were involved in growing crops only (a decrease of 6 percent compared to 2002/03 census results), 283 (0.1%) rearing livestock only, and 124,464 (43.2%) were involved in crop production as well as livestock keeping

Tabora region had a total rural agricultural population of 1,839,844 of whom 942,587 (51%) were males and 897,257 (49%) were females. Also, the distribution of household members by age and sex shows that the age group 0-14 constituted 45.4% and 45.2% of the total rural agricultural population for male and female respectively. On the other hand, the age group 15-64 (active population) was 51% of the total population.

Literacy Level for household members in Tabora region had a total literacy rate of 63.9 percent. The highest literacy rate was in Tabora Urban district (72) followed by Sikonge district (70%). Uyui (69%), Urambo (65%), Igunga (62%) and Nzega (57%). In the overall, the regional literacy rate has increased by 11.4 percent compared to 2002/03 census results which indicated an average rate of 57.9 percent.

Data on educational status was collected from individual agricultural households. The results show that 36 percent of the population aged 5 years and above in agricultural households had completed different levels of education followed by those who were attending school (31 %) while those who had never attended school accounted for 33 percent

ii) Crop Production

Land Area

The total area of land available to smallholders was 884,772 ha while the average usable area per household was 2.9 ha. About 67 percent of the total usable land was utilized. Igunga District had the largest utilized area per household (3.5 ha/hh) while the smallest area was reported in Nzega (1.7 ha/hh).

Planted Area

The total area planted with annual crops and vegetables was 688,902 hectares. The area planted with permanent crops was 26,480 hectares (4% of the total planted area). Cereal crops occupied a planted area of 438,848 hectares (63.7% of the total planted area with annual and vegetable crops), followed by oil seeds, 114,048 hectares (16.6%), pulses 25,401 hectares (3.7%), roots and tubers 19,246 hectares (2.8%) and fruits and vegetables 1,924 hectares (0.3%).

iii) Crop Types

The main crops in the region comprises of cereals (438,848 ha, 63%) of the total planted area, followed by oil seeds (114,048 ha, 17%), cash crops (88,434 ha, 13%), pulses (25,401 ha, 4%), root and tubers (19,246 ha, 0.3%) and fruits and vegetables (1,924 ha, 0.3%).

Cereal Production

The total area planted with cereals in the region was 438,848 ha where by maize occupied 291,775 hectares, followed by paddy (99,268 ha) and sorghum (45,837 ha). Other cereals planted were bulrush (1,208 ha) and finger millet (760 ha)

▪ Maize

Maize was the dominant annual crop grown in the region and it accounted for 44 percent of the total area planted with annual crops. Other crops in order of their importance (based on area planted) were paddy, sorghum, tobacco, cotton, cassava, beans, sweet potatoes, bulrush millet, finger millet, semis and sunflower.

The production of maize has increased from 143,122 tonnes in 2002/03 to 376,341 tonnes in 2007/08, an increase of 61.9 percent between the two agricultural years. The average area planted with maize per household ranged from 0.8 hectares in Nzega to 1.4 hectares in Igunga district.

Igunga had the largest planted area of maize (76,645 ha) followed by Nzega (65,120 ha), Urambo (59,735 ha), Uyui (53,551 ha), Sikonge (24,017 ha) and Tabora (12,707 ha).

▪ **Paddy**

Paddy was the second most important cereal crop in the region in terms of planted area. The number of households that grew paddy in the region was 111,527 equivalent to 41 percent of the total crop growing households in the region. The total production of paddy was 131,507 tonnes from a planted area of 99,268 hectares producing an average yield of 1.32 tonnes per hectare.

The district with the largest area planted with paddy was Nzega (47,775 ha) followed by Urambo (17,416 ha), Uyui (15,024 ha), Igunga (11,128 ha), Tabora Urban (4,482) and Sikonge (3,443 ha). There were some variations in the average area planted per crop growing household across the districts ranging from 0.57 hectares in Tabora Urban to 0.95 hectares in Nzega district.

Root and Tuber Crops Production

The total production of roots and tubers was 62,231 tonnes. Sweet potatoes production was the highest (33,323 tonnes or 46 percent of the total root and tuber crops production). The second crop in this category was cassava with 28,552 tonnes (43.5%), yams (253 tonnes, 0.4%) and Irish potatoes (103 tonnes, 0.2%), (Table 3.3). Total production of roots and tuber crops has increased by 33.5 percent compared to 2002/03 census results.

Cassava

The area planted with cassava was larger than that of any other root and tuber crop in the region (40,899 ha), equivalent to 6 percent of the total area planted with annual crops and vegetables and 54 percent of the area planted with roots and tubers.

Fruits and Vegetables

The total production of fruits and vegetables was 13,260 tonnes. The most cultivated fruit and vegetable crop was tomato with a production of 9,721 tonnes (73% of the total fruits and vegetables produced) followed by cabbage 1,350 tonnes (10.2%). The production of other fruit and vegetable crops was relatively small.

Permanent Crops

The planted area with permanent crops was 26,480 hectares which was 4 percent of the area planted with crops in the region. The most important permanent crop was mango which accounted for 4 percent of the total area planted with permanent crops followed by banana (2%), palm oil, orange and sugarcane; each had (1%).

iv) Use of Inputs

Improved Seeds

The planted area using improved seeds was 106,123 hectares or 15 percent of the total area planted with annual crops and vegetables.

Use of Fertilizers

Most of the annual crop growing households did not use any fertilizers. The area planted without fertilizer for annual crops was 562,483 hectares (82 percent of the total area planted with annual crops).

v) Irrigation

The area of annual crops and vegetables under irrigation was 22,721 hectares equivalent to 3.3 percent of the total planted area.

vi) Crop Storage and Marketing

Crop Storage

There were 285,786 crop growing households (99.3% of the total crop growing households) that stored various agricultural products in the region.

Crop Marketing

The number of households that managed to sell their crops was 229,738 (80 percent of the total number of crop growing households in the region). The percentage of crop growing households which sold crops was the highest in Urambo (80.3%) followed by Sikonge (62.2%), Uyui (53.0%), Igunga (47.9%), Tabora Urban (45.5%) and Nzega (42.1%).

vii) Agricultural Credit

Relatively, few agricultural households (26,537 hh, 9.2%) accessed credit, out of which 24,360 (92%) were male headed households and 2,188 (8%) were female headed households.

viii) Crop Extension Services

The number of agricultural households that received crop extension services was 178,516 (82% of the total crop growing households in the region). Some districts had more access to extension services than others. Tabora Urban had a relatively high proportion of households that received crop extension messages (82%), followed by Igunga (75%), Urambo (68%), Uyui (66%), Nzega (52%) and Sikonge (25%).

ix) Soil Erosion and Water Harvesting Facilities

The number of agricultural households that reported the presence of soil erosion and water harvesting facilities on their farms was 18,927 equivalents to 6.6 percent of the total number of agricultural households in the region. The proportion of farmers with soil erosion control and water harvesting facilities was the highest in Uyui district (5.4%) followed by Nzega (4.2%), Urambo and Sikonge, each had (2.7%), Igunga (2.5%), and Tabora Urban (2.2%).

x) Livestock and Poultry Production**▪ Cattle**

The total number of cattle in the region was 2,133,090. Cattle were the dominant livestock type in the region followed by goats, sheep and pigs. The region had 10.1 percent of the total cattle population of Tanzanian Mainland. The number of indigenous cattle was 2,123,645 (99.6% of the total number of cattle in the region), improved beef breeds were 7,075 (0.3%) and improved dairy breeds were 2,370 (0.1%). A total of 96,708 households (33.5% of the agricultural households or 77.5% of the livestock rearing households in the region) were engaged in cattle rearing (an average of 22 heads of cattle per cattle rearing household).

▪ Goats

The number of goat-rearing-households in the region was 84,075 (29.1% of the agricultural households or 67.4% of the livestock rearing households in the region). The households kept a total of 942,926 goats (an average of 11 goats per goat rearing household).

▪ Sheep

The number of sheep-rearing households was 38,426 (13.3% of the agricultural households or 30.8% of the livestock keeping households in the region). The households kept a total of 352,543 sheep (an average of 9 heads of sheep per sheep-rearing household).

- **Pigs**

The number of pig-rearing households in the region was 5,543 (2% of the total agricultural households or 4% of the livestock keeping households in the region). The households kept a total of 25,668 pigs giving an average of 5 pigs per pig rearing household.

- **Chicken**

The number of chicken rearing households was 212,604 raising 2,939,481 chicken which gives an average of 14 chicken per chicken-rearing household.

- xi) **Fish Farming**

The number of households involved in fish farming was 653 (0.2 percent of the total agricultural households in the region). Urambo was the leading district with 306 (47%) agricultural households involved in fish farming followed by Uyui with 252 households (39%), Sikonge with 56 households (9%) and Tabora Urban with 40 households (6%). Fish farming was not practiced in Nzega and Igunga districts.

- xii) **Poverty Indicators**

Availability of Toilets

The results show that 240,774 households or 83 percent of all the rural agricultural households used traditional pit latrines, 6,603 (2%) households used improved pit latrine and 1,792 (1%) households used flush toilets. The remaining 309 (0.1%) households had other unspecified types of toilets. A total of 38,968 households (14%) had no toilet facilities.

Household Assets

Of all the assets, bicycles were owned by the majority of the households (75% of the households) followed by radio (70%), mobile phones (34%), iron (22%), wheelbarrow (8%), vehicle (7%). Other assets, each was owned by less than 5 percent of the households.

Source of Energy for Lighting

Wick lamp was the most common source of energy for lighting in the region. About 82 percent of the total rural households used this source of energy followed by hurricane lamp (11%), pressure lamp (4%) and firewood (2%). Other sources (including electricity), each was used by less than one percent.

Energy for Cooking

The most prevalent source of energy for cooking was firewood, used by 96 percent of all the rural agricultural households. The second most common source of energy for cooking was charcoal (3%). The rest of the energy sources (including electricity) accounted for only one percent.

Roofing Materials

The most common roofing material used (for the main dwelling) was grass and/or leaves used by 65 percent of the rural agricultural households followed by iron sheets (21%), grass/mud (13%). Other roofing materials were used by about one percent of the households.

Number of Meals per Day

About 71 percent of the households in the region took three meals per day, 28 percent took two meals and one percent took one meal per day.

Food Security

Households which had never experienced food shortage were 48 percent of the total number of agricultural households in the region. Households which seldom had problems in satisfying their food needs were 30 percent and those which sometimes had food shortage were 8 percent. Households that often faced food shortage were 7 percent while those that always had food shortage were also 7 percent.

Main Sources of Cash Income

Selling of food crops was the main cash income activity reported by 60 percent of the rural agricultural households. The second main cash income activity was the sale of cash crops (11%) followed by casual cash earnings (3%), business income (6%), sale of livestock (4%), sale of livestock products (3%), wages/salaries (2%), cash remittance (2%) and sale of forestry products (2%). Other sources were of minor value.

1 BACKGROUND INFORMATION

1.1 Introduction

This part of the report presents a brief description of the region by providing information on geographical location, land area, climate, administrative set up, population and socio-economic indicators. The information aims at providing the user with a general understanding of the region and its resources.

1.2 Geographical Location and Boundaries

Tabora region is situated at the mid-west part of Tanzania between 4⁰ and 7⁰ below the Equator and 31⁰ - 43⁰ east of Greenwich Meridian. The region lies on the central plateau whereby in the north east, it shares the border with Shinyanga region. On the western side, it borders with Kigoma while in the south, it shares the border with Rukwa and Mbeya regions.

The region comprises six districts: Nzega, Igunga, Uyui, Urambo, Sikonge and Tabora Urban. The regional headquarters is located in Tabora Urban.

1.3 Land Area

The region has an area of 76,151 square kilometers of which, 194.3 square kilometers (1,943,280 hectares) are arable land.

1.4 Climate

1.4.1 Temperature

The dominant climate is warm with temperatures reaching the peak during September and October just before the start of the long rainy season. The Central Plateau has an average temperature of 23⁰C with a minimum temperature of 17⁰C and a maximum temperature of 28⁰C.

1.4.2 Rainfall

The region has one rainy season (long rainy season). The season falls almost entirely between November and May. The total annual precipitation decreases from West to East. In the West, the rainfall is over 1,000 mm while in the East it drops to 700 mm or less.

1.5 Population

According to population projections based on the 2002 Population and Housing Census, the population of Tabora region in 2011 was estimated at 2,443,049 inhabitants. The population of Tabora region ranked 6th out of the 21 regions of Tanzania Mainland.

1.6 Socio-Economic Indicators

The regional Gross Domestic Product (GDP) at current prices for the year 2008 was estimated to be Tshs 1,029,411 million (4.15 percent of the total GDP) with a per capita income of Tshs 474,181

The region is famous for forestry industry and game reserves. It has a total of 34,698 square kilometers of forestry reserves and 17,122 square kilometers of game reserves. The region is also famous for producing both food and cash crops. The main food crops include; maize, paddy, sorghum and finger millet. The main cash crops are; cotton and tobacco. Livestock keeping is also a very important economic activity. The main livestock raised are cattle, goats and sheep.

2 INTRODUCTION

This section provides technical and operational description of the National Sample Census of Agriculture (NSCA), carried out in the rural areas of Tanzania Mainland and Tanzania Zanzibar during the 2007/08 agricultural year. It details the background and the rationale for carrying out the NSCA in 2007/08 agricultural year. It also explains the sampling procedures, designing and implementation of the data processing system.

This report (Volume Vn) is among the 21 regional reports for the Mainland. Other Census reports include the Technical Report (Volume I), Crop Sector Report at National level (Volume II), Livestock Report at National level (Volume III), Large Scale Farms Report (Volume IV), Regional Reports (Volume V series), Zanzibar Livestock Report (Volume VI) and Zanzibar Crop Sector Report (Volume VII). Unlike the 2002/03 Agricultural Sample Census, the 2007/08 Sample Census does not have a separate report for Smallholder Household Characteristics and Access to Natural Resources Report. Other thematic reports will be produced depending on the demand and availability of funds.

This report is divided into five main sections; Background Information, Introduction, Census Results, District Profiles and Appendices. The definitions relating to all aspects of this report can be found in the questionnaire.

2.1 The Rationale for Conducting the National Sample Census of Agriculture

The Government of Tanzania has embarked on various plans geared to eradicate poverty by the year 2025 and Tanzania Zanzibar by the year 2020. In order to facilitate intervention and monitoring activities of the Poverty Monitoring Master Plan, the government has planned a series of censuses and surveys to assist in policy formulation, planning and to track changes in the wellbeing of the population of Tanzania. In this Master Plan, a series of Agricultural Censuses have been planned, the first one was undertaken in 2002/03 agricultural year and the second in 2007/08. Demands for reliable and timely agricultural data have become significantly increasing for monitoring outcomes and progress of the poverty monitoring tools like the Agricultural Sector Development Programmed (ASDP) and performance of the respective MDAs (ASLMs).

Following the decentralization of the Government's administration and planning functions, there has been a pressing need for agricultural and rural development data disaggregated at regional and district level. The provision of district level estimates will provide essential baseline information on

the state of agriculture that supports decision making by the Local Government Authorities and in the design of District Agricultural Development and Investment Projects (DADIPS). The increase in investment is an essential element in the national strategy for growth and reduction of poverty.

2.2 Census Objectives

The 2007/08 Agricultural Sample Census was designed to meet data needs of a wide range of users down to the district level including policy makers at local, regional and national levels, rural development agencies, funding institutions, researchers, NGOs, farmers organizations, and the like. The dataset is both extensive in its sample and detailed in its scope and coverage to meet the user demand.

The census was carried out in order to:

- Identify structural changes, in the size of farm household holdings, crop and livestock production, farm inputs and implement use. It also seeks to determine if there are any improvements in the rural infrastructures and the level of agricultural household living conditions;
- Provide benchmark data on productivity, production and agricultural practices in relation to policies and interventions promoted by the Ministry of Agriculture and Food Security and other stakeholders and
- Establish baseline data for the measurement of the impact of high level objectives of the Agricultural Sector Development Programme (ASDP), National Strategy for Growth and Reduction of Poverty and other rural development programmes and projects.

2.3 Census Scope and Coverage.

The 2007/08 Agricultural Sample Census was conducted for both large and small scale farms. The data was collected from a sample of 52,635 small scale agricultural households of which 48,880 were from the Mainland and 4,755 from Zanzibar. To meet National estimates, data was also collected from 1,006 Large Scale Farms (968 on the Mainland and 38 in Zanzibar) on a complete enumeration basis.

Three different questionnaires were used to collect data on agriculture and related aspects. These were:

- Small scale farms questionnaire;
- Community questionnaire; and
- Large scale farm questionnaire.

The small scale farm questionnaire was the main census instrument which included questions related to crop and livestock production and practices; population demographics; access to services; resources and infrastructure; issues on poverty and gender. Main subjects covered during the study include:-

- Household demographics and activities of the household members;
- Land access/ownership/tenure and use;
- Crop and livestock production and productivity;
- Access to inputs and farming implements;
- Access and use of credits;
- Crop marketing, storage;
- Fish farming;
- Investment activities: Irrigation structures, water harvesting, erosion control;
- Off farm income;
- Household living conditions (housing, sanitary facilities, etc);
- Livelihood constraints; and
- Poverty Indicators.

The community level questionnaire was designed to collect village data such as access and use of common resources, community tree plantation and seasonal farm gate prices.

Large scale farms questionnaire was administered to all large scale farms either privately or corporately managed. However, the analysis of Large Scale Farms is presented in a separate report (Volume IV).

2.4 Census Methodology

The main focus at all stages of the census execution was on data quality and this has been emphasized all the time. The main activities undertaken include:

- Census organization;

-
- Tabulation plan preparation;
 - Sample design;
 - Design of census questionnaire and other instruments;
 - Pilot test;
 - Training of trainers, supervisors and enumerators;
 - Information Education and Communication (IEC) campaign;
 - Data collection;
 - Field supervision and consistency checks;
 - Data processing:
 - Scanning,
 - Structure formatting application,
 - Batch validation application,
 - Manual data entry application,
 - Tabulation preparation using SPSS;
 - Table formatting and production of charts using Excel, maps generation using Arc GIS and Excel, Report preparation using Ms Word and Excel.

2.4.1 Census Organization

The census was conducted by the National Bureau of Statistics (NBS) in collaboration with Ministries of Agriculture, Food Security and Cooperatives, Livestock and Fisheries Development; Water; Industry and Trade; and the Prime Minister's Office, Regional Administration and Local Government in Tanzania Mainland. The Office of the Chief Government Statistician, (OCGS), Ministries of Agriculture and Natural Resources, Livestock and Fisheries in Tanzania Zanzibar.

At the national level, the Census was headed by the Director General of the National Bureau of Statistics, Tanzania Mainland in collaboration with the Chief Government Statistician, Tanzania Zanzibar. The planning Group formed by the Director General of NBS and the Chief Government Statistician consisted of staff from the Department of Agriculture Statistics of NBS, Department of Economic Statistics of OCGS, Department of Policy and Planning of the Ministry of Agriculture, Food Security and Cooperatives, Department of Policy and Planning of the Ministry of Livestock and Fisheries Development in the Mainland. Ministry of Livestock and Fisheries and the Ministry of Agriculture and Natural Resources in Zanzibar.

The Planning Group was responsible for all the census operations. Implementation of the census activities at the regional level was overseen by the Regional Statistical Managers of NBS and the Regional Agricultural Supervisors from the Prime Minister's Office, Regional Administration and Local Government. At the district level, the census activities were managed by two supervisors from the Prime Minister's Office, Regional Administration and Local Government (PMO-RALG). The supervisors managed the enumerators who also came from PMO-RALG. As for Zanzibar, implementation of the census activities at the regional level was overseen by the Regional Statistical Officers and Regional Agricultural Officers. At District level, implementation of the census activities was managed by District Agricultural Development Officers (DADOs). In addition, there was a national mobile team to supervise the census operations.

The Censuses and Surveys Technical Working Group (CSTWG) under MKUKUTA provided support in sourcing financing, approving budget allocation and monitoring progress of the census. A Technical committee for the census was established with members from key stakeholder organizations and its main function was to approve the proposed instruments and procedures developed by the Planning Group. It also approved the tabulation and analytical reports prepared from the census data.

2.4.2 Tabulation Plan Preparation

The tabulation plan was developed considering the tabulations from previous censuses and surveys to allow trend analysis and comparisons as well as the needs of end users.

2.4.3 Sample Design

The Mainland sample consisted of 3,192 villages. These villages were drawn from the National Master Sample (NMS) developed by the National Bureau of Statistics (NBS) to serve as national framework for the conduct of household based surveys in the country. The National Master Sample was developed from the 2002 Population and Housing Census. The total Mainland sample was 47,880 agricultural households. In Zanzibar, a total of 317 Enumeration Areas (EAs) were selected and 4,755 agricultural households were covered. National wide, all regions and districts were sampled except four urban districts (three from Mainland and one from Zanzibar).

In both Mainland and Zanzibar, a two stage sample was used. The number of villages/Enumeration Areas (EAs) was selected for the first stage with a probability proportional to the number of villages/EAs in each district. In the second stage, 15 households were selected from a list of

households in each village/EA using systematic random sampling. Table 1.1 gives the sample size of households, villages and districts for the Mainland and Zanzibar.

Table 2.1: Census Sample

Description	Mainland	Zanzibar	Total
Households	47,880	4,755	52,635
Villages/EAs	3,192	317	3,509
Districts	133	9	142
Regions	21	5	26

2.4.4 Questionnaire Design and Other Census Instruments

The questionnaire was designed following users meetings to ensure that the questions asked were in line with the users data needs. Several features were incorporated into the design of the questionnaire to increase the accuracy of the data as follows:

- Where feasible, all variables were extensively coded to reduce post enumeration coding errors;
- The definitions for each section were printed on the opposite page so that the enumerator could easily refer to the instructions whilst interviewing the respondent;
- The responses to all the questions were placed in boxes printed on the questionnaire, with one box per character. This feature made it possible to use scanning and Intelligent Character Recognition (ICR) technologies for data capture;
- Skip patterns were used to reduce unnecessary and incorrect coding of sections which do not apply to the respondent; and
- Each section was clearly numbered, which facilitated the use of skip patterns and provide a reference for data type coding for the programming of CSPro and SPSS.

Three other instruments were used:

- Village Listing Forms were used for the listing of households in the village/EA and from this list, a systematic sample of 15 agricultural households were selected;

- A training manual which was used by the trainer for the cascade/pyramid training of supervisors and enumerators; and
- Enumerator's Instructions Manual was used as reference material.

2.4.5 Field Pilot-Testing of the Census Instruments

The questionnaire was pilot-tested in four locations (Arusha, Dodoma, Unguja and Pemba). This was done to check the wording, flow and relevance of the questions and to finalize crop lists, questionnaire coding and manuals. In addition, several data collection methodologies had to be finalized, namely; livestock numbers in pastoral communities, mixed cropping, use of percentages in the questionnaire and finalizing skip patterns and documenting consistency checks.

2.4.6 Training of Trainers, Supervisors and Enumerators

During the training, a cascade/pyramid training techniques were employed to maintain statistical standards. The top level of training was provided to 78 national and regional supervisors (65 from Mainland and 13 from Zanzibar). The trainers were members of the Planning Group from the National Bureau of Statistics, the sector Ministries of Agriculture and Office of the Chief Government Statistician, Zanzibar. In each region, three training sessions were conducted for the district supervisors and enumerators. The training concentrated on questionnaires, listing forms, field level census methodology and definitions. Emphasis was placed on consistency checking in the field. Tests were given to the enumerators and supervisors and the best 50 % of the trainees were selected for the actual field work. The remaining 50% were assigned the work of listing the households in the villages they belong and they were later terminated. The best trained enumerators were assigned to list the remaining villages. Each enumerator was assigned to enumerate two villages.

2.4.7 Information, Education and Communication (IEC) Campaign

Radios, televisions, newspapers, leaflets, t-shirts and caps were used to create awareness of the Agricultural Sample Census to the public. This strategy helped in sensitizing the public for the field level activities in order to increase the response rate. The t-shirts and caps were given to the field staff and village chairpersons. The village chairpersons assisted to locate the selected households.

2.4.8 Data Collection

Data collection activities for the 2007/08 Agricultural Sample Census lasted for three months from June to August 2009. The direct interview method was used to collect data during the enumeration. Data collection was monitored by a hierarchical system of supervisors which included the Mobile Response Team, Regional and District Supervisors. The Mobile Response Team headed by the Manager of Agriculture Statistics Department, provided the overall direction to the field operations and responded to queries arising outside the scope of the training exercise. Decisions made on the definitions and procedures were then communicated back to all the enumerators via the Regional and District Supervisors. On the Mainland, each region had 2 Regional Supervisors (total of 42) and 2 district supervisors per district (Total 266).

District supervision and enumeration were performed by staff from the Prime Minister's Office, Regional Administration and Local Government and the sector Ministry of Agriculture (PMO-RALG). Regional and national supervision was provided by senior staff from the NBS and sector Ministries of Agriculture. In Zanzibar, the enumeration was conducted by staff from the Ministry of Agriculture and Natural Resources and Ministry of Livestock and Fisheries. Supervision was provided by senior officers of the same Ministries and the Office of the Chief Government Statistician.

During the household listing exercise, some 3,192 extension staff participated on the Mainland. A total of 177 enumerators participated during the listing exercise and enumeration using the small holder questionnaire in Zanzibar. A total of 1,596 enumerators were involved in data collection using the small holder questionnaire on the Mainland. Additional 5% of the enumerators were held as reserves in case of drop outs during the enumeration exercise.

2.4.9 Field Supervision and Consistency Checks

Enumerators were trained to probe the respondents until they were satisfied with the responses before they recorded them in the questionnaire. The first check on the questionnaire was carried out by the enumerators in the field during enumeration, followed by District, Regional and National supervisors. Supervisory visits at all levels of supervision focused on checking the completeness of the questionnaires and consistency. Inconsistencies encountered were corrected, and where necessary, a call back to the respondent was made by the enumerator to obtain the correct information. Further quality control checks were made by the district supervisors.

2.4.10 Data Processing

Data processing involved the following process:

- Data entry;
- Data structure formatting;
- Batch validation; and
- Tabulation.

Data Entry

Scanning and ICR data capture technology was used. This did not only increase the speed of data entry but also increased the accuracy due to reduction of keystroke errors. Interactive validation routines were incorporated into the ICR software to trap errors during the verification process.

Prior to scanning, all the questionnaires underwent a manual cleaning exercise by checking that the questionnaire had a full set of pages, correct identification and good hand-writing. A score was given to each questionnaire based on the legibility and the completeness of enumeration. This score was used to assess the quality of enumeration and supervision.

CSPRO was used for data entry of the questionnaires that were rejected by the ICR extraction application.

Batch Validation

A batch validation program was developed in CSPRO in order to identify inconsistencies within a questionnaire. This was in addition to the interactive validation during the ICR extraction process. The procedures varied from simple range checking within each variable to more complex checking between variables. After data cleaning, the tables were prepared based on a pre-designed tabulation plan.

Tabulation

Statistical Package for Social Sciences (SPSS) was used to produce the census tables and Microsoft Excel was used to organize the tables and compute the additional indicators. Excel was also used to produce charts while Arc GIS was used for generating the maps.

Report Writing

The report writing focused on the regional comparisons, time series and national estimates. Microsoft Excel was used to produce charts; Arc GIS and Excel were used to generate maps, whereas Microsoft Word was used in compiling and report writing.

Data Quality Control

A great deal of emphasis was placed on data quality throughout the whole exercise, from planning; questionnaire design, training, supervision, data entry, validation and cleaning/editing. As a result of this, it is believed that the census is highly accurate and representative of what was experienced at the field level during the census year. With very few exceptions, the variables in the questionnaire are within the norms for Tanzania and they follow the expected time series trends when compared to historical data.

2.5 Funding Arrangements

The 2007/08 Agricultural Sample Census was supported mainly by the Department for International Development (DFID) and the Japan International Cooperation Agency (JICA) which together, financed most of the operational activities. Other funds for the census activities were from the Government of Tanzania. In addition, technical assistance was provided by the Food and Agriculture Organisation (FAO).

3 CENSUS RESULTS

This part of the report presents the results of the census for Tabora region based on the statistical tables presented in Appendices. The results are presented in different forms including brief summaries, charts, condensed tables, graphs and maps in order to make it easy for the users to understand. Comparisons are made between related variables and between districts. Comparisons are also made with past censuses and surveys' results such as the 1994/95 National Sample Census of Agriculture (NSCA), the 1995/96 and the 1996/97 Expanded Agricultural Surveys, the 1997/98 Integrated Agricultural Survey, the 1998/99 District Integrated Agricultural Survey and the 1999/2000 Rapid Agricultural Appraisal Survey and the 2002/03 Agricultural Sample Census. The results are divided into four main sections which are household characteristics, crop results, livestock results and poverty indicators. Compared to previous censuses and surveys, more effort has been made in analyzing the results in order to formulate solid conclusions.

3.1 Household Characteristics

3.1.1 Types of Agricultural Household

The number of agricultural households in Tabora region was 288,446, an increase of 18 percent compared to 2002/03 agricultural year. The largest number of agricultural households was in Nzega district (79,584 hh, 27.6%) followed by Urambo (62,000 hh, 21.5%), Igunga (57,402 hh, 20%), Uyui (50,937 hh, 17.7%), Sikonge, (22,514 hh, 7.8%) and Tabora Urban (16,011 hh, 5.5%).

Most of the households (163,699 hh, 56.8%) were involved in growing crops only (a decrease of 6 percent compared to 2002/03 census results), 283 (0.1%) rearing livestock only, and 124,464 (43.2%) were involved in crop production as well as livestock keeping (an increase of 6 percent compared to 2002/03 agricultural census results), (Chart 3.1).

3.1.2 Livelihood Activities/Sources of Income

The census results show that most of the agricultural households ranked crop farming (91.8% of the total agricultural households) as an activity that provided most of their cash income followed by employment (4.1%), livestock keeping/herding, fishing and fish farming. Annual crop farming was the most important source of livelihood for all the districts as it accounted for more than 90 percent in each district except Uyui and Tabora Urban which accounted for 87 and 88 percent respectively (Table 3.1).

Table 3.1: Number of Heads of Agricultural Households by Main Activity and District , 2007/08 Agricultural Year

District	Crop/Seaweed Farming		Livestock Keeping / Herding		Fishing		Employment		Other		Total	
	Number	%	Number	%	Number	%	Number	%	Number	%	Number	%
Nzega	74,868	94.1	197	0.2	197	0.2	3,537	4.4	786	1.0	79,584	100
Igunga	52,299	91.1	1,134	2.0	0	0.0	2,268	4.0	1,701	3.0	57,402	100
Uyui	44,523	87.4	3,647	7.2	126	0.2	2,515	4.9	126	0.2	50,937	100
Urambo	58,326	94.1	1,378	2.2	0	0.0	1,531	2.5	765	1.2	62,000	100
Sikonge	20,513	91.1	389	1.7	111	0.5	1,001	4.4	500	2.2	22,514	100
Tabora Urban	14,153	88.4	277	1.7	0	0.0	1,067	6.7	514	3.2	16,011	100
Total	264,681	91.8	7,021	2.4	433	0.2	11,919	4.1	4,392	1.5	288,447	100

3.1.3 Number and Age of Household Members

The age group 0-14 constituted 45 percent of the total rural agricultural population, while the age group 15–64 (active population) was 51 percent (Chart 3.2). The region had an average household size of 6 persons per household with Nzega district having the lowest household size of five (5).

3.1.4 Level of Education

In order to obtain information on the level of education, data on literacy and education attainment were obtained for all household members aged five years and above.

Literacy

The information on literacy level for family members aged five years and above was obtained by asking individual households if their respective family members could read and write in Kiswahili

only, English only, both English and Swahili or in any other language. Literacy is based on the ability to read and write Swahili, English or both.

Literacy Level for Household Members

Tabora region had a total literacy rate of 63.9 percent. The highest literacy rate was in Tabora Urban district (72%) followed by Sikonge district (70%). Uyui (69%) Urambo (65%), Igunga (62%) and Nzega (57%), (Chart 3.3). In the overall, the regional literacy rate has increased by 11.4 percent compared to 2002/03 census results which indicated an average rate of 57.9 percent.

Literacy Rates for Heads of Household

The average literacy rate for the heads of household in the region was 67 percent. The literacy rate for the male heads was 71 percent while that of female heads was 43 percent. District wise, the literacy rates of male heads were generally higher than those of female heads in all the districts. However, the literacy rate for female heads of household has increased by 10 percent compared to 2002/03 agricultural census results. The district with the highest average literacy rate amongst the heads of household was Tabora Urban with 72 percent followed by Sikonge (70%), Uyui (69%), Urambo (65%), Igunga (62%) and Nzega (57%), (Chart 3.4).

Educational Status

Information on educational status was collected from individual agricultural households. The results show that 36 percent of the population aged 5 years and above in agricultural households in the region had

completed different levels of education; this is an increase of 2 percent compared to 2002/03 census results. About 31 percent were still attending school (Chart 3.5), an increase of 10 percent compared to that of 2002/03 census results. However, household members who have never attended school were 33 percent, a decrease of 12 percent compared to that of 2002/03 agricultural year. Out of the total population aged 5 years and above which has completed various levels of education in the region, 23 percent was in Nzega district, 22 percent in Urambo, 21 percent in Igunga, 19 percent in Uyui, 9 percent in Sikonge and 6 percent in Tabora Urban district, (Chart 3.6).

However, the region had an average of 65 percent of heads of agricultural households with formal education. Household heads with adult education were 2 percent and those with no education were 33 percent, (Chart 3.7).

With regard to primary education attainment of the heads of agricultural households in the region, Uyui district had the highest proportion (72%) which has completed primary education, followed by Sikonge district (70%), Tabora Urban district (68%), Urambo district (67%), Nzega and Igunga districts, each with 54 percent, (Chart 3.8).

3.2 Land Use

Land area and *planted area* are two different types of area measurements. Land area refers to the physical area of land and is the same regardless of the number of crops planted on it in one year. Planted area is the total area planted with crops in a year and the area is summed up if there were more than one crop on the same land per year. A number of terms have been used in this section which requires definition for clarification as follows:

Land available refers to the area of land that has been allocated to smallholders through customary law, official title or other forms of ownership. Land available does NOT mean the total area of land that is designated as agricultural land in the country, but it is the land that is available to smallholders given the location of villages and lack of access to more remote parcels of unused agricultural designated land.

Usable land refers to the available land minus the land that cannot be used e.g. bare rock, shallow soils, steep slopes, swamp areas etc. It does however include un-cleared bush, Utilized land refers to the land that was used during the year.

3.2.1 Area of Land Utilized

The total area of land available to smallholders was 840,772 hectares. The regional average land area utilized for agriculture per household was only 2.9 hectares. This land area is above the national average estimated at 2.0 hectares.

Large differences in the utilized land area per household did exist between districts with Igunga and Nzega utilizing between 3.54 and 1.7 hectares per household. The percentage of land utilization per household was the highest in Igunga district (86.45%), a decrease of 6 percent and was the lowest in Urambo (51%), a decrease of 18 percent when compared to 2002/03 agricultural census results, (Map 3.6). About 67 percent of the total land available to smallholders was utilized and about 33 percent of the usable land available to smallholders was not utilized, (Chart 3.9).

3.2.2 Types of Land Use

The land area under temporary mono-crops was 512,607 hectares (40.6% of the total land available to smallholders), an increase of 3 percent when compared to 2002/03 agricultural year, followed by area under fallow (216,541ha, 17%), an increase of 10 percent, temporary mix (192,069 ha, 15%), a decrease by 5 percent, natural bush (101,315 ha, 8%), an increase of 1 percent, un-cultivable usable land (93,014 ha, 7%), a decrease of 6 percent, area under pasture (98,932 ha, 8%), an increase of 4 percent, annual mix (15,931 ha, 1.2%), a decrease of 1.8 percent, area rented to others (14,671ha, 1.1%), unusable land (10,926 ha, 0.8%), a decrease of 3 percent, permanent mono crops (8,235ha, 0.6%), a decrease of 1.1 percent, area planted with trees (5,246 ha, 0.4%) and area under permanent/annual mixed (15,931 ha, 0.4%), (Chart 3.11).

3.3 Annual Crops and Vegetable Production

Tabora region has only one main rainy season, namely; the long rainy season (November to May). The quantities of crops produced in that season are used as a base for comparison with the past censuses and surveys.

3.3.1 Area Planted

The total area planted with annual crops and vegetables in tabora region was 688,902 hectares, out of that about 100 percent (688,301 ha) of the total area was planted during the long rainy season

and very small area (601 ha) was planted in the short rainy season, (Chart 3.12). The district with the largest planted area per household in the long rainy season was Igunga (3.6 ha/hh) followed by Uyui and Sikonge (2.3 ha/hh each), Urambo (2.2ha/hh), Nzega (1.9 ha/hh), and Tabora Urban district (1.5%), (Chart 3.13).

Analysis of the Most Important Crops

Results on crop production are presented in two different sections. The first section compares the importance of each crop regardless of whether it is an annual or permanent. The second section contains a more detailed analysis on production based on crop types.

3.3.2 Crop Importance

Maize was the dominant annual crop grown in Tabora region with a total planted area of 291,775 hectares followed by paddy (99,268 ha), groundnuts (97,089 ha), cotton (57,902 ha) and sorghum (45,837 ha). The remaining crops had less than 40,000 hectares. The area planted with maize constituted 44 percent of the total area planted with annual crops in the region, (Chart 3.14).

Households that grew cotton (2.3 ha/hh), sorghum (1.3 ha/hh) and maize (1 ha/hh) had larger planted areas per household. The remaining crops each accounted for less than one hectare (Chart 3.15).

3.3.3 Crop Types

Cereals were the main crops grown in Tabora region. The area planted with cereals was 438,848 hectares (63% of the total area planted with annuals) followed by oil seeds (114,048 hectares, 17%), cash crops (88,434 hectares, 13%), pulses (25,401 hectares, 4%), roots and tubers (19,246 hectares, 3%), fruits and vegetables (1,924 hectares, 0.3%), (Chart 3.16).

3.3.3.1 Cereal Crop Production

The total production of cereals was 557,603 tonnes. Maize was the dominant cereal crop with 376,341 tonnes equivalent to 67.5 percent of the total cereal crops production, followed by paddy (23.6%), sorghum (8.6%), bulrush and finger millets, each had 0.2 percent. Wheat and barley were not grown in the region.

Table 3.1: Production and Yield of Cereal Crops by Season

Crop	Short Rainy Season			Long Rainy Season			Total		
	Area planted (Ha)	Quantity harvested	Yield (T/Ha)	Area planted (Ha)	Quantity harvested	Yield (T/Ha)	Area planted (Ha)	Quantity harvested	Yield (T/Ha)
Maize	213	204.62	0.96	291,563	376,136.37	1.3	291,775	376,340.99	1.3
Paddy	0	0	0	99,268	131,506.95	1.3	99,268	131,506.95	1.3
Sorghum	0	0	0	45,837	47,993.52	1.0	45,837	47,993.52	1.0
Bulrush millet	0	0	0	1,208	912.17	0.8	1,208	912.17	0.8
Finger millet	0	0	0	760	849.53	1.1	760	849.53	1.1
Total	213	205		438,635	557,399		438,848	557,603.16	

Maize had the largest planted area (67 percent of the total area planted with cereal crops) followed by paddy (19%), sorghum (13%), bulrush millet (0.4%) and finger millet (0.3%). Maize and paddy had the largest yield (1.3 tons/ha each) followed by finger millet (1.1 tons/ha), sorghum (1 ton/ha), and bulrush millet (0.8 ton/ha) (Table 3.1).

3.3.3.1.1 Maize

Maize dominated the production of cereal crops in the region. The number of households which grew maize was 282,318 (67% of the total annual crop growing households in the region), an increase of 18.5 percent compared to that of 2002/03 agricultural year. The total production of maize was 376,341 tonnes from a planted area of 291,775 hectares equivalent to an average yield of 1.3 tonnes per hectare.

The average area planted with maize per household ranged from 0.83 hectares per household in Nzega and Tabora Urban districts to 1.09 hectares per household in Sikonge district, (Chart 3.20).

3.3.3.1.2 Paddy

Paddy was the second most important cereal crop in the region in terms of planted area. The number of households that grew paddy in the region was 111,527 (41 percent of the total annual crop growing households in the region), an increase of 17 percent compared to agricultural census results of 2002/03. The total production of paddy was 131,507 tones from a planted area of

99,268 hectares giving an average yield of 1.3 tones per hectare. The district with the largest area planted with paddy was Nzega (47,775 hectares or 48 percent of the total planted area in the region) followed by Urambo (17,416 ha, 18%), Uyui (15,024 ha, 15%), Igunga (11,128 ha, 11%), Tabora Urban (4,482 ha, 5%) and Sikonge (3,443 ha, 3%), (Map 3.11). However, there were variations in the average area planted per crop growing household within the districts ranging from 0.57 hectares per household in Tabora Urban to 0.95 hectares per household in Nzega district (Chart 3.22).

3.3.3.1.3 Other Cereals

Other cereals were produced in small quantities except sorghum of which the planted areas were as follows: Tabora Urban (28,387 ha), Nzega (20,382 ha), Igunga (11,360 ha), Uyui (6,757 ha), Sikonge (2,642 ha) and Urambo (1,095 ha).

3.3.3.2 Roots and Tuber Crops Production

The total production of roots and tubers was 62,231 tonnes. Sweet potatoes production was the highest (33,323 tonnes or 46 percent of the total root and tuber crops production). The second crop in this category was cassava with 28,552 tonnes (43.5%), yams (253 tonnes, 0.4%) and Irish potatoes (103 tonnes, 0.2%), (Table 3.2). Total production of roots and tuber crops has increased by 33.5 percent compared to 2002/03 census results.

Table 3.2: Production and Yield of Roots and Tuber Crops by Season

Crop	Short Rainy Season			Long Rainy Season			Total		
	Area planted (Ha)	Quantity harvested	Yield (T/Ha)	Area planted (Ha)	Quantity harvested	Yield (T/Ha)	Area planted (Ha)	Quantity harvested	Yield (T/Ha)
Cassava	0	0	0	22,020	28,552	1.3	22,020	28,552	1.3
Sweet Potatoes	0	0	0	18,612	33,323	1.79	18,612	33,323	1.79
Irish potatoes	0	0	0	156	103	0.66	156	103	0.66
Yams	0	0	0	110	253	2.3	110	253	2.3
Total	0	0		40,898	62,231		40,898	62,231	

The area planted with cassava was the largest (22,020 ha, 53.8%) of the total area planted with roots and tuber crops followed by sweet potatoes (18,612 ha, 45.5%), Irish potatoes (156 ha, 0.4%) and yams (110 ha, 0.3%). Yams had the highest yield of 2.3 tonnes per hectare followed by sweet potatoes (1.79 t/ha), cassava (1.3 t/ha) and Irish potatoes (0.66 t/ha), (Chart 3.25).

3.3.3.2.1 Cassava

The number of households growing cassava in the region was 41,312 (a decrease of 12.8 percent compared to 2002/03 census results). The total production of cassava during the census year was 28,552 tonnes from a planted area of 22,020 hectares giving an average yield of 1.3 tonnes per hectare, (Table 3.3).

Urambo district had the largest planted area of cassava (10,223 ha, 46.4%) followed by Uyui (4,287 ha, 19.5%), Nzega (2,917 ha, 13.2%), Tabora Urban (2,395 ha, 10.9%) and Sikonge (2,115 ha, 9.6%). Igunga had the smallest area planted with cassava in the region (84 ha, 0.4%). The average cassava planted area per cassava growing households was 0.39 hectares. However,

there were some small district variations, the largest area planted per household was in Nzega district (0.61 ha/hh) followed by Sikonge and Urambo, each with (0.4 ha/hh), Tabora Urban (0.35 ha/hh), Uyui (0.52ha/hh). Igunga district had less than 0.5 ha/hh, (Chart 3.26).

Table 3.3: Percentage of Cassava Planted Area and Planted Area per Household by District

District	Number of Households	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)	Area/hh	Percentage of Total Area Planted
Nzega	8,057	2,917	4,366	1.5	0.4	13.2
Igunga	283	84	91	1.1	0.3	0.4
Uyui	8,049	4,287	9,640	2.2	0.5	19.5
Urambo	16,993	10,223	4,339	0.4	0.6	46.4
Sikonge	3,502	2,115	5,393	2.6	0.6	9.6
Tabora Urban	4,428	2,395	4,723	2.0	0.5	10.9
Total	41,312	22,020	28,552	1.3	0.5	100.0

3.3.3.2 Sweet Potatoes

The number of households which grew sweet potatoes in Tabora region was 52,772. The total production of sweet potatoes during the census year was 33,323 tonnes from a planted area of 18,613 hectares giving an average yield of 1.79 tonnes per hectare. Production of sweet potatoes has increased by 62.9 percent while the number of households growing sweet potatoes has increased by 47.6 percent compared to 2002/03 agricultural census results.

Igunga district had the largest planted area of sweet potatoes (7,173 ha, 38.54%) followed by Nzega (3,622 ha, 19.5%), Uyui (2,730 ha, 14.7%), Urambo (1,975 ha, 10.6%), Sikonge (1,699 ha, 9.1%) and Tabora Urban (1,413 ha, 7.6%), (Chart 3.28). Other root and tuber crops were of minor importance.

3.3.3.3 Pulse Crops Production

The total area planted with pulses was 25,105 hectares representing 5 percent of the total area planted with annual crops out of which 9,797 hectares were planted with beans (39 percent of the total area planted with pulses) followed by bambaranuts (8,135 ha, 32.4%), green peas (3,145 ha, 12.5%), cow peas (2,689 ha, 10.7%), and field peas (60 ha, 0.2%).

MajorPulses

The total production of pulses was 22,513 tonnes. The production of bambaranuts was 7,666 tonnes or 34.1 percent of the total pulse production followed by green gram (6,773 tonnes, 31.1%), beans (5,924 tonnes, 26.3%), cow peas (1,320 tonnes, 5.9%) and chick peas (741 tonnes, 3.3%) and field peas (89 tonnes, 0.39%). Green grams had a relatively higher yield (2.15 tonnes per hectare) than other pulses. The yields of the rest of the pulses in tonnes per hectare were field peas (1.48 t/ha), bambaranuts (0.94 t/ha), beans (0.6 t/ha), chick peas (0.58 t/ha) and cow peas (0.49 t/ha) (Chart 3.29).

3.3.3.3.1 Beans

Beans dominated the production of pulse crops in the region in terms of planted area. The number of households growing beans in Tabora region was 27,238. The total production of beans in the region was 5,923 tonnes from a planted area of 9,797 hectares, with a yield of 0.6 tonnes per hectare. Production of beans has decreased by 21 percent compared to 2002/03 agriculture census results.

The largest area planted with beans in the region was in Urambo district (4,775 ha, 48.7% of the area planted with beans in the region) followed by Sikonge (2,249 ha, 23%), Uyui (1,943 ha, 20%), Nzega (422 ha, 4.3%) and Tabora Urban (408 ha, 4%). However, Igunga district did not grow beans. Moreover, the largest area planted with beans per household were in Sikonge district (0.44 ha/hh) and Urambo district with (0.39 ha/hh). With exception of Nzega district, the variations in area planted with beans per household for the rest of the districts were significantly small ranging from 0.2 hectare/hh in Nzega district to 0.4 hectare/hh in Sikonge district, (Chart 3.30, Map 3.14).

3.3.3.3.2 Bambaranuts

Total number of households that grew bambaranuts was 28,518 in a planted area of 8,135 hectares. Total production of bambaranuts in the region was 7,666 tonnes with an average yield of 0.94 tonnes per hectare. Nzega had the largest planted area of bambaranuts with 4,243 hectares (52% of the total area planted with bambaranuts in the region) followed by Uyui (1,558 ha, 19%), Igunga (1,047 ha, 13%), Sikonge (683 ha, 8%), Urambo (446 ha, 5%) and Tabora Urban (158 ha 2%). Uyui district had the largest area planted per household (0.34 ha/hh) followed by Igunga (0.31 ha/hh), Sikonge and Nzega (0.28 ha/hh each), Tabora Urban (0.23 ha/hh) and Urambo (0.21 ha/hh). (Chart 3.31)

3.3.3.4 Oil Seed Production

The total production of oil seed crops was 103,613 tonnes planted on an area of 114,048 hectares (16 percent of the total area planted with annual crops). Groundnuts were the most important oil seeds with 97,089 hectares (85% of the total area planted with oil seeds) followed by sunflower (15,415 ha, 13%), simsim (1,420 ha, 14%), soya beans (80 ha, 0.1%) and castor fug (43 ha, 0.04%). The production of oil seeds has increased by 69 percent compared to 2002/03 census results.

The yield of groundnuts was 0.94 tonnes per hectare, soya beans (0.89 t/ha), sunflower (0.77 /ha), castor fug (0.59 t/ha) and simsim (0.39 t/ha). Production of groundnuts was 91,162 tonnes, equivalent to 88 percent of the total production of oil seeds, followed by sunflower (11.3%) and simsim (0.5%). The production of soya beans and castor fung were very small, (Chart 3.32 and Table 3.4).

Table 3.4: Total Area, Quantity Harvested and Yield of Oil Seed Crops.

Crop	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)
Sunflower	15,415	11,802	0.77
Simsim	1,420	551	0.39
Groundnut	97,089	91,162	0.94
Soya Beans	80	71	0.89
Castor Fung	45	27	0.59
Total	114,048	103,613	0.91

Groundnuts

The number of households growing groundnuts in the region was 179,945. The total production of groundnuts in the region was 91,162 tonnes from a planted area of 97,089 hectares giving a yield of 0.94 tonnes per hectare.

Nzega district had the largest planted area with groundnuts in the region (26 percent of the total planted area with groundnuts) followed by Urambo (23,747 ha, 25%), Uyui (21,351 ha, 22%), Igunga (14,234 ha, 14.7%), Sikonge (9,259 ha, 9.5%) and Tabora Urban (3,528 ha, 3.6%).

The largest area planted per groundnut growing household was in Igunga district

(0.64 ha), followed by Uyui (0.57 ha), Urambo (0.56 ha), Sikonge (0.55 ha), Nzega (0.48 ha) and Tabora Urban (0.42 ha) (Chart 3.33).

The production of groundnuts in the region has increased by 65 percent from 31,618 tonnes in 2002/03 to 91,162 tonnes in 2007/08. The largest production was recorded in Urambo district with 27,605 tonnes (30 % of the total production in the region) followed by Nzega (19,223 tonnes, 21%), Uyui (18,214 tonnes, 20%), Igunga (13,978 tonnes, 15%) and Sikonge (9,485 tonnes, 10%). Tabora Urban district had the lowest production (2,658 tonnes, 3%), (Table 3.5).

Table 3.5: Area Planted, Quantity Harvested and Percentage of Total Groundnuts Production by District, 2007/08 Agriculture Sample Census

District	Planted Area (ha)	Quantity Harvested (tons)	Percent of Total Production
Nzega	24,970	19,223	21
Igunga	14,234	13,978	15
Uyui	21,351	18,214	20
Urambo	23,747	27,605	30
Sikonge	9,259	9,485	10
Tabora Urban	3,528	2,658	3
Total	97,089	91,162	100

3.3.3.5 Fruits and Vegetables

Table 3.6: Area, Harvest and Yield of Fruits and Vegetables

Crop	Planted Area (hectare)	Quantity Harvested (tons)	Yield (T/Ha)
Okra	1	.79	0.99
Radish	4	2.41	0.60
Bitter Aubergine	52	166.63	3.20
Onion	365	1,299.23	3.56
Ginger	102	66.03	0.65
Cabbage	152	1,349.80	8.90
Tomatoes	976	9,721.01	9.96
Carrot	2	3.56	2.22
Chillies	23	9.88	0.43
Amaranths	112	194.77	1.73
Pumpkins	56	26.29	0.47
Cucumber	7	51.71	7.18
Water Mellon	72	367.65	5.10
Total	1,924	13,260	

The production of fruits and vegetables was relatively small. Table 3.6 shows the planted area and the yield of fruits and vegetables produced. Most of the smallholders grew these crops as cash crops and not merely for household consumption. Most of the fruits were from permanent crops and only water melon was reported as an annual crop.

The total production of fruits and vegetables was 13,260 tonnes. The most cultivated fruit and vegetable crop was tomato with a production of 9,721 tonnes (73% of the total fruits and vegetables produced) followed by cabbage (1,349 tonnes, 10%), onions (1,299 tonnes, 9.8%), water melon (368 tonnes, 2.7%), amaranths (195 tonnes, 1.4%), bitter aborigine (167 tonnes, 1.2%) and ginger (66 tonnes, 0.4%). The production of other fruit and vegetable crops was relatively small (Table 3.6).

The yield of tomatoes was 9.95 t/ha, cabbage (8.93 t/ha), cucumber (7.43 t/ha) and water melon (5.11 t/ha). Cabbages and bitter aubergine had yields of 1,140 kg/ha and 872 kg/ha respectively.

3.3.3.5.1 Tomatoes

The number of households growing tomatoes in the region was 5,476. (2.3 percent of the total crop growing households). Uyui district had the largest planted area (23.4% of the total area planted with tomatoes in the region) followed by Igunga

(22%), Nzega (20.4%), Tabora Urban (15.3%) and Sikonge (0.6%), (Chart 3.37). The highest proportion of land with tomatoes was in Tabora Urban followed by Uyui. All the districts had relatively low percentages of land used for tomato production. Production of tomatoes has increased by 74 percent when compared to 2002/03 agricultural census results.

The largest area planted per tomato growing household was in Uyui district (0.26 ha/hh) followed by Igunga (0.22 ha/hh), Tabora Urban (0.20 ha/hh), Urambo (0.14 ha/hh) Nzega (0.13 ha/hh) and Sikonge (0.1 ha/hh), (Chart 3.38 and Map 3.20). The total area planted with tomatoes accounted for 0.2 percent of the total area planted with annual crops in the region.

3.3.3.5.2 Cabbage

The number of households growing cabbage in the region was 704 equivalent to 0.30 percent of the total crop growing households. Nzega district had the largest planted area of cabbage (119 ha, 78% of the total area planted with cabbage in the region), followed by Tabora Urban (17 ha, 11%) and Urambo (15 ha, 10%). Other districts did not plant cabbages, (Chart 3.39). Total production of cabbage has increased by 95 percent compared to agricultural census results of 2002/03.

3.3.3.5.3 Onions

The number of households growing onion in the region was 1,342. This represented 1.4 percent of the total crop growing households. Igunga district had the largest planted area with onions (201 ha), followed by Nzega (119 ha), Tabora Urban (22 ha), Urambo (12), and Sikonge (11 ha). In Uyui district growing of onion was not practised (Chart 3.40 and Map 3.17).

The largest planted area per onion growing household was in Igunga district (0.47 ha/hh) followed by Nzega and Sikonge districts, each with (0.2 ha/hh), Tabora Urban (0.18 ha/hh), Urambo (0.08 ha/hh), (Chart 3.40 and Map 3.18). The area planted with onion accounted for 0.2 percent of the total area planted with annual crops in the region.

The district with the highest yield of onions was Nzega (5.67 ton/ha), followed by Urambo (5.06 tons/ha), Tabora Urban (2.76 tons/ha) and igunga (2.43). The lowest yield was in Sikonge (0.99 tons/ha) (Map 3.17).

Total production of onions in the region has decreased by 49 percent compared to that of 2002/03 agricultural year.

3.3.3.6 Other Annual Crops Production

Most of other annual crops were of cash crops. Of the 89,147 hectares planted with other annual crops, cotton was the most dominant followed by tobacco. Pyrethrum was also planted but its planted area was almost negligible. (Chart 3.41)

3.3.3.6.1 Cotton

About 57,614 tonnes of cotton were produced in the region on a planted area of 57,614 hectares. The crop was grown in four districts only (Igunga, Urambo, Uyui and Nzega). Igunga had the largest area planted with cotton (50,212 ha, 87.1%) followed by Urambo district (4,153 ha, 7.2%), Nzega and Uyui districts each had 2.8 percent. The region had an average of 1.3 hectares per household, with Igunga district having the largest planted area per household followed by Urambo district (Chart 3.42). The production of cotton has increased by 75 percent compared to the production of 2002/03 agricultural year. However, Sikonge and Tabora Urban districts did not grow cotton.

3.3.3.6.2 Tobacco

The quantity of tobacco produced was 36,056 tonnes. The total planted area with tobacco was 31,431 hectares. The production was more concentrated in three districts with Urambo having the largest planted area (16,517 ha, 52.6% of the total area planted with tobacco in the region) followed by Uyui (8,618 ha, 27.4%), Sikonge (3,523 ha, 14.3%), Nzega (517 ha 1.6%), and Tabora Urban (456 ha, 1.2%). However, Igunga district did not grow tobacco, (Chart 3.43). The production of Tobacco has increased by 17.8 percent compared to the production of 2002/03 agricultural year.

3.4 Permanent Crops

Permanent crops (sometimes referred to as perennial crops) are crops that normally take over a year to mature and once matured, can be harvested for a number of years. For most of the crops, it is easy to determine if they are annual or permanent. However, for crops like cassava and bananas, the distinction is not so clear. Cassava has varieties that mature within a year and produce only one harvest, whilst other varieties survive for more than one year and produce several harvests. In this census, cassava has been treated as an annual crop. Conversely, bananas normally take less than a year to mature, survive for more than one year and are thus treated as a permanent crop. In this report, the results are presented for the most important permanent crops in terms of production, yield and area planted. Previous censuses and surveys did not measure these variables for permanent crops, therefore, no time series analysis is made in this section.

The total area planted with permanent crops was 26,480 hectares (4% of the area planted with crops in the region). However, the area planted with annual crops was not the actual physical land area as it included the area of crops planted more than once on the same land, whilst for the planted area for permanent crops was the same as the physical planted land area. So, the percentage of physical area planted with permanent crops could be higher than that indicated in Chart 3.44.

The most important permanent crop in the region was mango planted on 1,027 hectares (4% of the planted area with permanent crops) followed by banana (434 ha, 1.7%), orange (317 ha, 1.2%), palm oil (243 ha, 1%), sugarcane (180 ha, 0.7%), and coconut (68 ha, 0.3%). Other permanent crops accounted for 91 percent of the total area planted with permanent crops, (Chart 3.45).

Urambo district had the largest area under permanent crops (11,734 ha, 44.3%) followed by Uyui (5,002 ha, 18.9%), Nzega (3,723 ha, 14.1%), Tabora Urban (3,300 ha, 12.5%), Sikonge (2,332 ha, 8.8%) and Igunga (389 ha, 1.5%).

However, Sikonge had the largest area per permanent crop growing household (0.64 ha/hh) followed by Tabora Urban (0.59 ha/hh) Urambo and Uyui each with (0.58 ha/hh), Igunga (0.55 ha/hh), Nzega (0.33 ha/hh) (Chart 3.46).

3.4.1 Mangoes

The total production of mangoes was 10,553 tonnes. In terms of area planted, mango was the most important permanent crop grown by smallholders in the region. They were grown by 8,043 households (2% of the total crop growing households). The average area planted with mangoes per household was relatively small (0.21 hectares per mango growing household) with an average yield of 14.42 tonnes per hectare from a harvested area of 1,720 hectares. Urambo had the largest area of mangoes in the region (439 ha, 25.5%) followed by Nzega (389 ha, 22.6%), Uyui (316 ha, 18.3%), Tabora Urban (305 ha, 17.7%), Igunga (174 ha, 10.1%) and Sikonge (97 ha, 5.6%). Mango production has decreased by 89 percent when compared to 2002/03 census results.

However, the average area planted with mangoes per mango growing household was the highest in Igunga district (0.61 ha/hh) followed by Uyui (0.50 ha/hh), Sikonge (0.35 ha/hh), Tabora Urban (0.23 ha/hh), Urambo (0.17 ha/hh) and Nzega (0.13 ha/hh), (Chart 3.47)

3.4.2 Banana

The total production of banana by smallholders was 804 tonnes. The area planted with banana was the second most important permanent crop grown by smallholders in the region. It was grown by 983 households (1% of the total crop growing households). The average area planted with banana per household was relatively small (0.11 ha/hh) with an average yield of 2.1 tonnes per hectare from a harvested area of 804 hectares.

Urambo had the largest planted area of bananas in the region (240 ha, 54.6%) followed by Uyui (63 ha, 14.3%), Tabora Urban (62 ha, 14.1%), Sikonge (51 ha, 11.6%) and Nzega (23 ha, 5.2%). Banana was not planted in Igunga. However, the area planted with banana per banana growing household was the highest in Uyui (0.25 ha/hh), followed by Tabora Urban (0.23 ha/hh), Sikonge (0.15 ha/hh), Urambo (0.10 ha/hh) and Nzega (0.02 ha/hh) (Chart 3.48).

3.4.3 Palm Oil

The total production of palm oil was 201 tonnes. The area planted with palm oil was the second most important permanent crop grown in the region. It was grown by 1,953 households (1.5% of the total crop growing households). The average area planted with palm oil per household was 0.3 hectares per palm oil growing household and the average yield was 493 kg/ha from a harvested area of 408 hectares.

Urambo district had the largest area planted with palm oil in the region (504 ha, 86%) followed by Tabora Urban (67 ha, 11.4%) and Sikonge (6 ha, 2.7%). Palm oil production was not grown in the rest of the districts. However, the average area planted with palm oil per palm oil planting household was the largest in Tabora Urban (0.43 ha/hh) followed by Urambo (0.3 ha/hh) and Sikonge (0.1 ha/hh), (Chart 3.49).

3.5 Input/Implement Use

3.5.1 Use of Improved Seeds

The results show that, planted area using improved seeds was 106,123 hectares representing 15.4 percent of the total area planted with annual crops and vegetables. The planted area using improved seeds during the

long rainy season was 105,836 hectares, representing 99.7 percent of the total area planted with improved seeds during short and long rainy seasons. Urambo district had the largest area planted with improved seeds (33,566 ha, 31.6% of the total area planted with improved seeds during short and long rainy seasons), followed by Igunga (31,287 ha, 29.5%), Uyui (21,800 ha, 20.5%), Nzego (8,411 ha, 7.9%) and Sikonge (8,408 ha, 7.9%) (Chart 3.50).

During the short rainy season, only 287 hectares or 0.3 percent of the total planted area was planted with improved seeds. Igunga was the only district which used improved seeds during the season.

3.5.2 Fertilizer Use

3.5.2.1 Organic fertilizer Use

Organic fertilizer was applied to a total area of 53,339 hectares (7.7% of the total planted area during long rainy season). However, organic fertilizer was not used during the short rainy season. Nzego district had the largest area (31.8%) planted using organic fertilizer, followed by Igunga (25.6%) and Uyui (22.3%). The number of households using organic fertilizer during the season was 46,099 or 5.5 percent of the total households engaged in the production of annual crops and vegetables.

3.5.2.2 Inorganic fertilizer Use

Inorganic fertilizer was applied to 73,080 hectares during long rainy season only. It was mostly used in Urambo district with 50.5% of the area planted using inorganic fertilizer, followed by Uyui (28.2%) and Sikonge (14.6%).

The number of households using inorganic fertilizer during the season was 57,615 (6.9% of the total households involved in the production of annual crops and vegetables

during the season). Generally, only a small area (11%) of the total area planted with annual crops and vegetables was planted using inorganic fertilizer, (Chart 3.51).

3.5.3 Pesticide Use

Pesticides are chemicals used for controlling insects, diseases and weeds. This section analyses the use of these chemicals by smallholders on annual crops in the region. The pesticides include insecticides, herbicides and fungicides.

3.5.3.1 Insecticide Use

The planted area applied with insecticides in Tabora region during the short and long rainy seasons was 60,666 hectares. During the long rainy season, about 60,379 hectares, were applied with insecticides while during the short rainy, season 287 hectares were applied with insecticides.

Igunga was the only district that used insecticides in the short rainy season. During the long rainy season, Urambo had the highest area planted (18,338 ha, 30.4% of the area planted using insecticides in the region) using insecticides, followed by Igunga (16,640

ha, 27.6%) and Uyui (22.3%). Tabora Urban had the smallest area (3.2%) planted using insecticides, (Chart 3.52). The number of households which used insecticides during the long rainy season was 46,624 or 5.5 percent of the total households involved in the production of annual crops and vegetables. In the short rainy season, only 142 households (0.02%) used insecticides.

3.5.3.2 Herbicide Use

The number of households which used herbicides during the long rainy season was 5,797 or 0.7 percent of the total households involved in the production of annual crops and vegetables. However, the chemical was not used during the short rainy season. The planted area applied with herbicides in the region was 7,782 hectares (1.1 percent of the total area planted with annual crops and vegetables). Uyui had the largest proportion (49.3%) of the area planted with herbicides, followed by Sikonge (26.6%), Urambo (11.3%) and Igunga (8.8%). Tabora Urban had the smallest area (0.9%) applied with herbicides.

3.5.3.3 Fungicides Use

During the short and long rainy seasons, the planted area applied with fungicides was 9,118 hectares. About 8,831 hectares was applied with fungicides during the long rainy season, while only 287 hectares of the area was applied with the chemical during the short rainy season. Urambo had the highest proportion (49.8%) of the area planted with fungicides, followed by Igunga (18.5%) and Uyui (17.7%). Nzega district had the smallest area (0.9%) planted using fungicides. The number of households which used fungicides during the long rainy season was 8,882 (1.1 percent of the total households involved in the production of annual crops and vegetables). Urambo had the majority of the households (3,980 hh, 44.8 %) which used the chemical, followed by Uyui (1,887 hh, 21.2%) and Igunga (1276 hh, 14.4%). Nzega reported the smallest number of households (393 hh, 4.4%).

3.6 Irrigation

Water is the limiting factor to crop production in the majority of areas in Tanzania and without water; most of the agricultural practices applied to crops do not result in significant increases in production. This section deals with the area under irrigation for different crops and the means by which water was extracted from the sources and applied to the field.

3.6.1 Area Planted with Annual Crops and Under Irrigation

Irrigation in the region was applied only during the long rainy season. The area of annual crops under irrigation was 22,721 hectares, equivalent to 3 percent of the total planted area, (Chart 3.53).

The district with the largest planted area under irrigation for annual crops during the long rainy season was Uyui with 8,777 hectares (38.6 percent of the total irrigated planted area with annual crops in the region) followed by Nzega with 7,000 hectares (30.8%). The remaining districts had irrigated area of less than 3,000 hectares each (Chart 3.54).

3.6.2 Sources of Water Used for Irrigation

The main source of water used for irrigation was from lake (4,854 households, 42.9% of the households which used irrigation) followed by canal (4,074 households, 36%), river (1,930 households, 17%), (dam 283 households, 2.5%) and well (40 households, 0.4%), (Chart 3.55).

3.6.3 Methods of Obtaining Water for Irrigation

The most common method of getting water for irrigation was the hand bucket used by 70.1 percent of the households followed by gravity with 26.4 percent, hand pump with 2.2 percent and motor pump with 1.4 percent, (Chart 3.56).

The hand bucket was used by a large number of households in Nzega (2,162 hh, 27.2%) followed by Urambo (2,143 hh, 27.0%), Uyui (1,761 hh, 22.2%), Tabora Urban (909 hh, 11.5%) and Igunga (850 hh, 10.7%). Sikonge district had the least number (111 hh, 1.4%) which used hand bucket as their main method of obtaining water for irrigation. Gravity was most common in Igunga district with 37.9 percent of the households which used the method to obtain water for irrigation, followed by Nzega (32.9%) and Uyui (25.2%), (Chart 3.57).

3.7 Use of Agricultural Equipment

Matchet and handhoe were the most widely used farming tools by large numbers of agricultural households in the region. Other agricultural equipment used in order of importance include hand sprayer, rater, chipper, oil press and oil mill, ox-plough and ox-planter.

Nzega district had the highest number of agricultural households which used machet (263,700 hh) and hand hoe (282,165 hh) in land clearing. Urambo, Igunga and Uyui districts also had higher numbers of agricultural households using machet and hand hoe for land clearing. (Chart 3.58). Other farming equipment used include ox-cart (36,985 households, out of which 12,331 were in Igunga district), tractor (464 households, out of which 197 were in Nzega), tractor plough (1,073 households) and tractor harrow (3,629 households)

Use of Agriculture Animals

An ox was the most widely used animal for agricultural activities in Tabora region. The number of households which used oxen was 119,313 or 41.3 percent of the total number of agricultural households in the region, followed by bulls (5.7%), cows (1.2%) and donkeys (0.4%). Nzega district had the largest number of households (50,501 hh, 42.3%) that used oxen for agricultural activities, followed by Igunga (37,417 hh, 31.4%) and Uyui (14,841hh, 12.4%), (Chart 3.59)

3.8 CROP STORAGE AND MARKETING

3.8.1 Crop Storage

Total number of households which stored crops in Tabora region was 285,706 or 99.2 percent of the total agricultural households in the region. Nzega had the largest number of households which stored crops (79,387 hh, 27.8%) that stored crops in the region followed by Urambo (21.5%), Igunga (19.6%), Uyui (17.7%), Sikonge (7.8%) and Tabora Urban (5.6%), (Chart 3.60).

Methods of Storage

Most of the households stored their crops in sacks or open drums (396,922 households, 47 percent of the agricultural households in the region) followed by locally made traditional structures (38%), improved locally made and unprotected pile, each with (1%). Other methods like airtight drum, modern store and others had less than one percent while the remaining 13 percent did not store their crops, (Chart 3.61).

Nzega district was the leading district with 129,495 households using sacks or open drums as the method of crop storage followed by Urambo 87,718 households, Uyui 84,769 households, Igunga 50,173 households, Tabora Urban 23,364 households and Sikonge 21,402 households, (Chart 3.62).

3.8.2 Crop Marketing

The number of households that reported selling crops was 230,005 which represent 80 percent of the total number of households. The percentage of crop growing households which sold their crops was the highest in Urambo (93%) followed by Sikonge (85%), Igunga (83%), Uyui (83%), Nzega (67%) and Tabora Urban (62%), (Chart 3.63).

Main Marketing Problems

Low price for agricultural produce was the main marketing problem reported by 35 percent of the crop growing households. Apart from low market prices, other problems were longer distances to the markets (3.4%), high transport costs (3.3%), lack of transport (2.2%), cooperative problems (0.7%), and lack of market information (0.6%). Other marketing problems were minor with less than one percent of the total reported problems, (Chart 3.64).

3.9 Access to Crop Production Services

3.9.1 Access to Agricultural Credit

The census results show that few agricultural households (26,537 hh, 9.2%) were able to access agricultural credits. Urambo district was the leading district with (14,849 hh, 24%) followed by Uyui (7,420 hh, 14.6%), Sikonge (2,891 hh, 12.8 %), Nzega (1,179 hh, 1.5 %) and Tabora Urban (198 hh, 1.2 %) which accessed credit, (Chart 3.65 and Table 3.7). The number of households with access to credits has increased by 4 percent compared to the 2002/03 census results.

Table 3.7: Access to Agricultural Credits

District	Number of Households	Percentage	Total number of Households
Nzega	1,179	1.5	79,584
Igunga	0	.0	57,402
Uyui	7,420	14.6	50,937
Urambo	14,849	24.0	62,000
Sikonge	2,891	12.8	22,514
Tabora Urban	198	1.2	16,011
Total	26,537	9.2	288,447

The major agricultural credit provider in Tabora region was cooperatives (79%), followed by family, friends or relatives (9%) and NGOs and development projects (6%) while the remaining sources accounted for less than 5 percent (Chart 3.66).

3.9.2 Crop Extension

The number of agricultural households that received crop extension was 178,516 (62% of the total crop growing households in the region) (Chart 3.67)

Some districts had more access to extension services than others, with Tabora Urban having the largest proportion of the households (82%) that received crop extension messages followed by Igunga (75%), Urambo (68%), Uyui (66%), Nzega (52%), Sikonge (25%), (Chart 3.68).

3.9.2.1 Source of Crop Extension Messages

Of the households which received extension advice, the Government provided the service to 151,248 households or 48 percent of the total agricultural households followed by Radios/ Televisions/News Papers (42,993 hh, 13.7%), NGOs (34,834 hh, 11.1%), Neighbours (33,717 hh, 10.7%), Cooperatives (23,741 hh, 7.5%), Large Scale Farms (20,301 hh, 6.4%) and Other sources (8,089 hh, 2.6%), (Chart 3.69).

3.10 Erosion Control Facilities

Erosion control and water harvesting facilities are grouped together as they normally have dual purposes of reducing erosion and increasing the amount of water available for crop production. The number of agricultural households that had soil erosion and water harvesting facilities on their farms was 288,447 or 2 percent of the total number of agricultural households in the region.

The proportion of households with soil erosion control and water harvesting facilities was the highest in Uyui (5.4%) followed by Nzega (4.2%), Sikonge and Urambo, each with 2.7% and Igunga (2.5%), (Chart 3.70).

Erosion control bund structures accounted for 47 percent of the total number of structures, followed by terraces (23%) and water harvesting bund (17%). However, the remaining structures were of less importance as they accounted for less than 10 percent, (Chart 3.71).

3.11 LIVESTOCK RESULTS

3.11.1 Cattle Production

The total number of cattle in the region was 2,133,090. Cattle were the dominant livestock type in the region followed by goats, sheep and pigs. The region had 9.3 percent of the total cattle population of Tanzania Mainland. Production of cattle in the region has increased by 36 percent compared to 2002/03 agricultural census results, (Chart 3.72).

Cattle Population

Most of the cattle were of the indigenous type (2,123,645 heads or 99.6 percent of the total number of cattle in the region) followed by dairy breeds (7,075 heads, 0.3%) and beef breeds (2,370 heads, 0.1%). The number of indigenous cattle has increased by 36 percent (from 1,566,169 heads in 2003 to 2,123,645 heads in 2008). The census results show that, out of the 124,747 livestock rearing households, 96,708 households (77.5%) kept 2.1 million heads of cattle.

This was equivalent to an average of 22 heads of cattle per cattle-keeping-household, a decrease of about one percent compared to 2002/03 census results. The district with the largest number of cattle was Igunga which had about 685,701 cattle (32% of the total cattle in the region) followed by Nzega (490,660 heads, 23%), Uyui (426,361 heads, 20%), Urambo (256,573 heads, 12%), Sikonge (205,238 heads, 9.63%), and Tabora Urban (68,549 heads, 3.2%), (Chart 3.73).

3.11.2 Goat Production

Goat rearing was the second most important livestock keeping activity in the region followed by sheep and pig rearing.

Goat Population

The number of goat-rearing-households in Tabora region was 84,075 (67% of all the livestock keeping households in the region) with a total of 942,926 goats, giving an average of 11heads per goat-rearing-household. The number of households rearing goats has increased by 28 percent compared to 2002/03 census results when the number of goat rearing households was

65,487. The number of goats has also increased by 31 percent (from 718,996 goats in 2003) (Chart 3.74).

District wise, Igunga had the largest number of goats (364,252 goats, 39% of all the goats in the region), followed by Nzega (194,538 goats, 21%), Uyui (164,382 goats, 17%), Urambo (110,681 goats, 12%), Sikonge (67,208 goats, 7%) and Tabora Urban district (41,867 goats, 4%), (Chart 3.75).

3.11.3 Sheep Production

Sheep rearing was the third most important livestock keeping activity in Tabora region after cattle and goats.

Sheep Population

The number of sheep-rearing households was 38,426 (31% of all the livestock rearing households in the region) which raised a total of 352,543 sheep, giving an average of 9 heads per sheep-rearing household. The number of sheep has increased by about 50 percent compared to 2002/03 census results when the number of sheep in the region was 235,213 (Chart 3.76).

District wise, Igunga had the largest number of sheep (195,024 heads, 55%) followed by Uyui (59,489 heads, 17%), Nzega (56,200 heads, 16%), Sikonge (25,905 heads, 7%), Urambo (9,798 heads, 3%) and Tabora Urban (6,128 heads, 2%). All the sheep (100%) in the region were of the indigenous type, (Chart 3.77).

3.11.4 Pig Production

Piggery was the least important livestock keeping activity in the region after cattle, goats and sheep. The number of pigs in the region was 25,668. The district with the largest number of pigs was Nzega with 8,450 pigs (33% of the total pig population in the region) followed by Urambo (5,668 pigs, 22%), Igunga (5,102 pigs, 20%), Sikonge (3,113 pigs, 12%) and Uyui (1,006 pigs, 4%), (Chart 3.78).

However Tabora Urban district had the highest number of pigs per pig rearing household (15 pigs/hh) followed by Sikonge (11pigs/hh). Other districts each had less than 10 pigs per household.

3.11.5 Chicken Production

The poultry sector in Tabora region was dominated by chicken production.

3.11.5.1 Chicken Population

The number of households keeping chicken was 212,604 raising a total of 2,939,481 chicken, equivalent to an average of 14 chicken per chicken-rearing household.

The number of chicken has increased from 2,507,469 chickens in 2002/03 agriculture sample census to 2,939,481 chickens in 2007/08 agriculture sample census (Chart 3.79)

The district with the largest number of chicken was Nzega with 727,061 chicken (25% of the total number of chicken in the region) followed by Urambo (637,604, 22%), Igunga (552,615, 19%), Uyui (529,241, 18%), Sikonge (296,405, 10%) and Tabora Urban (196,555, 7%), (Chart 3.80). Chicken production in the region has increased by 17 percent when compared to that of 2002/03 agricultural year when the number of chicken was 2,507,469.

3.11.5.2 Chicken Flock Size

The results show that, a total of 208,689 households or 98 percent of the chicken-rearing households were keeping 1-19 chicken (2,601,481 chickens) with an average of 12 chickens per household. The remaining 3,912 households (2%) were keeping a flock size of 50 and above chicken with an average of 86 chickens per household.

3.11.6 Other Livestock

There were 51,764 ducks, 2,210 guinea pigs, 786 turkeys, 1,572 rabbits, 7,253 donkeys and 79,824 dogs. The largest number of ducks was in Nzega district (11,004 ducks, 21%) followed by Sikonge (10,562 ducks, 20%), Urambo (9,338 ducks, 18%), Tabora Urban (8,776 ducks, 17%), Uyui (6,414 ducks, 12%) and Igunga district (5,669 ducks, 11%). However, Igunga district had the largest number of dogs (25,087 dogs, 31%) followed by Nzega (22,598 dogs, 28%) and Urambo district (13,778 dogs, 17%). Other districts each had less than 10,000 dogs.

3.11.7 Disease and Pest Control

3.11.7.1 Ticks and Tsetse fly

The results show that, 39 percent and 6 percent of the total livestock-keeping households reported to have encountered ticks and tsetse fly problems respectively. Chart 3.81 shows that there was a predominance of tick related diseases over tsetse related diseases. Incidence of tick problem was the highest in Igunga district whilst the incidence of tsetse flies problem was the highest in Uyui district.

The incidences of both problems were the lowest in Tabora Urban district.

3.11.7.2 De worming

Livestock rearing households that dewormed their livestock were 84,174 (36% of the total livestock rearing households in the region). About 65 percent of the households dewormed their cattle, goats (38%), sheep (4%) and pigs (32%). District wise, Nzega district had the largest percentage of households (41%) that dewormed their livestock followed by Uyui (40%), Igunga (37%), Urambo (30%), Sikonge (27%) and Tabora Urban (25%), (Chart 3.82).

3.11.8 Livestock Extension Services

The number of households that received livestock extension advice was 104,206 which is equivalent to 36 percent of the livestock rearing households. The main livestock extension agent was the government which provided advice to about 89 percent of the households which received the service followed by Radios/TVs/Newspapers (23%), Neighbours (18%), NGOs/Dev projects (15%), Large scale farmers (13%) and Cooperatives (8%).

3.11.9 Fish Farming

The number of households involved in fish farming was 653; representing 0.2 percent of the total agricultural households in the region. The number of households has almost doubled (194%) when compared to 2002/03 agricultural census results.

Urambo was the leading district with 306 households (47%) involved in fish farming followed by Uyui (252 hh, 39%), Sikonge (56 hh, 9%), Tabora Urban (40 hh, 6%). However, Nzega and Igunga districts did not practice fish farming,

The main source of fingerings was the NGOs/projects which provided fingerling to 459 households or 48 percent of the fish farming households followed by government institutions (248 hh, 26%), own pond and natural pond, each with 126 households (13%).

Most of the fish farming households (90% of households practicing fish farming) in the region used the dug-out-pond system and tilapia was the only fish species planted. The number of fish harvested was 1,014,913 with a quantity of 301,229 tonnes. Urambo district had the largest number of fish (956,789, 94%) followed by Uyui (52,823, 5%). Other districts had the remaining 5,300 or 5 percent of the total number of the harvested fish.

In terms of tonnage, Urambo had also the largest quantity of 245,244 tonnes (81%) followed by Uyui (53,452 tonnes, 18%). Other districts had the remaining 2,533 tonnes or one percent of the total fish harvest. Most of the fish harvest was sold (281,464 tonnes, 93%) with Urambo district having sold 226,108 tonnes (80%) and Uyui (52,823 tonnes, 19%). Other districts sold the remaining 2,533 tonnes (1%).

3.12 POVERTY INDICATORS

The agricultural census collected data on poverty for the purpose of providing a base for tracking progress in the Poverty Reduction Strategies undertaken by the government

3.12.1 Types of Toilet

A large number of rural agricultural households used traditional pit latrine (240,774 households, 83% of all the rural agricultural households) while 6,603 households (2%) used improved pit latrine (household owned) and 1,792 households (1%) used flush toilets. The remaining 309 households (0.1%) used other toilet facilities. However, 38,968 households (14%) in the region had no toilet facilities, (Chart 3.83).

However, 38,968 households (14%) in the region had no toilet facilities, (Chart 3.83).

The percentage of households without toilets within the districts shows that, Igunga district had the largest proportion of 22 percent followed by Nzega with 19 percent and Sikonge district with 11 percent. Other districts each had less than 10 percent.

3.12.2 Household Assets

Bicycles were owned by the majority (75%) of the rural agricultural households followed by radios (70%), mobile phones (34%), iron (22%), wheelbarrows (8%) and vehicles (7%). Other assets were of minor importance accounted for less than 5 percent (Chart 3.84).

3.12.3 Sources of Energy for Lighting

Wick lamp was the most common source of energy for lighting used by 81.6 percent of the total rural agricultural households. The second common source was hurricane lamp used by 11 percent of the households followed by pressure lamp (3.6%), firewood (1.7%), solar (0.8%) and electricity (0.7%), (Chart 3.85).

3.12.4 Sources of Energy for Cooking

The main source of energy for cooking in the region was firewood used by 95.8 percent of the rural agricultural households. The second source was charcoal used by 3.2 percent of the households. Other sources such as electricity, solar, paraffin/kerosene, bottled gas, crop residues, livestock dung, and bottled gas was insignificantly used. (Chart 3.86).

3.12.5 Roofing Material

The most common roofing material used by the agricultural households was grass/leaves used by 187,696 households or 65 percent of the agricultural households followed by iron sheets (59,660 hh, 21%), grass and mud (36,078 hh, 13%). The remaining materials (tiles, concrete, asbestos, other) accounted for less than 2 percent (Chart 3.87).

However, 80 percent of the households in Nzega district used grass/leaves as roofing material followed by Urambo (75%), Sikonge (66%), Igunga (65%), Uyui (64%) and Igunga (35%).

3.12.6 Access to Drinking Water

During the dry season, the main source of drinking water for the rural agricultural households was the unprotected well (159,167 hh, 55%) followed by protected well (38,984 hh, 14 %), surface water such as lake, dam, river or stream (28,322 hh, 10%), unprotected spring (19,714 hh, 7%), uncovered rainwater catchments (19,162 hh, 7%) and piped water (15,421 hh, 5%). The remaining sources had a total of 2 percent of the households.

During the wet season, the main source of drinking water was the unprotected well (158,347 hh, 55%) followed by protected well (36,603 hh, 13%), uncovered rainwater catchments (30,260 hh, 10%), surface water (20,582 hh, 7%), unprotected spring (18,245 hh, 6%) and piped water (15,897 hh, 6%). The remaining sources had a total of 3 percent of the households, (Chart 3.88a).

About 57 percent of the rural agricultural households in the region obtained their drinking water within a distance of less than one kilometer during the wet season compared to 46 percent of the households during the dry season. This means that, 43 percent of the agricultural households obtained their drinking water from a distance of one or more kilometers during the wet compared to 54 percent of the households during the dry season. The most common distance from the source of drinking water was between 500m and 2 km, (Chart 3.88b).

3.12.7 Food Consumption Pattern

3.12.7.1 Number of Meals per Day

The majority of the households in the region normally had 3 meals per day (204,997 hh, 71%) followed by 2 meals per day (80,732 hh, 28%) and 1 meal per day (2,718 hh, 1%), (Chart 3.89).

3.12.7.2 Meat Consumption Frequency

The number of agricultural households that did not consume meat during the week preceding the census was 93,906 or 33 percent of the total households in the region. Those which consumed meat at least once a week were 194,541 or 67 percent of the total households. The number of households that consumed meat once a week was 117,458 (41%), twice a week (52,800 hh, 18%), three times a week (16,772 hh, 6%) and four times a week (4,899 hh, 2%). The remaining 2,611 (1%) households consumed meat five to seven times a week.

3.12.7.3 Fish Consumption Frequency

The number of agricultural households that did not consume fish during the week preceding the census was 116,534 or 40 percent of the total households in the region. Those which consumed meat at least once a week were 171,943 or 60 percent of the total households. The number of households that consumed fish once a week was 90,304 (31%), twice a week (48,097 hh, 17%), three times a week (16,958 hh, 6%) and four times a week (8,868 hh, 3%). The remaining 7,685 (3%) households consumed fish five to seven times a week.

3.12.8 Food Security

A total of 137,647 households (48 percent of the agricultural households in the region) reported to have never experienced problems in satisfying their households with food, while 86,965 households (30%) seldom experienced the problem, sometimes (22,662 hh, 8%), always (21,193 hh, 7%), often (21,193 hh, 7%). However, Urambo district had the highest percentage of households (55%) without food shortage while Igunga had the highest percentage of households (17%) that always had food insufficient.

3.12.9 Main Sources of Cash Income

The main source of cash income for most of the agricultural households in the region was from the sale of food crops (172,232 hh, 59.7%) followed by sale of cash crops (31,798 hh, 11%), casual cash earnings (25,199 hh, 8.7%), business income (18,586 hh, 6.4%). Other sources had a total contribution of only 14 percent, (Chart 3.90).

4 TABORA PROFILES

This section presents the status of crops and livestock production, access to natural resources and services, demography and poverty for both the region as a whole and for each district.

4.1 Region Profile

The region profile describes the status of the agricultural sector in the region and compares it with other regions in the country. Tabora region experienced less acute land scarcity with the total utilizable land remaining slightly above the 2002/03 national average. Also, together with Mtwara, Lindi, and Ruvuma regions had at least 50% or slightly more of the households reported land sufficiency while all other regions reported land sufficiency below 50%.

Tabora region had the largest number of households producing tobacco (33,987 or 45.4%), the largest planted area (31,431 ha or 48.7%) and accounted for the largest production of the crop (36,056 tons or 51.1%). Also, it had the third largest area planted with cotton (57,901 ha or 10.1%) and had the third largest area planted with fertilizer (53,339 ha) after Shinyanga (67,439 ha) and Singida (54,586 ha).

4.2 District Profiles

The following district profiles highlight the characteristics of each district and compare them in relation to population, main crops and livestock production and productivity, access to services and resources and levels of poverty.

4.2.1 Nzega

Nzega district had the largest number of agricultural households (79,584 hh, 27.6%) in the region. Most of its smallholders were involved in crop and livestock farming (55%), followed by crops only (45%). The district had no households keeping livestock only and no pastoralists.

The most important livelihood activity for smallholder households in the district was annual crop farming (57%), followed by off-farm income (43%). Compared to other districts in the region, Nzega had the second largest percentage of female headed households (16 % of the total district heads of household). With an average household size of 6 members per household, it had the same average as that of the region. Nzega had the lowest literacy rate (57%) among the smallholder households reflected by the relatively low level of school attendance in the district. The literacy rate for the heads of household was the lowest (59%) in the region. It had the second smallest planted

area per household (1.9ha) and the allocated area was almost fully utilized indicating a high level of land pressure.

The district was important for maize production in the region and had a planted area of 65,120 ha however, the planted area per household was the lowest (0.8 ha) in the region. Paddy production was also very important with the largest planted area of 47,775 hectares but the production of sorghum was relatively small (2,283 ha). Cassava production was moderate (4,529 tonnes) accounting for 15.6 percent of the total quantity harvested in the region. The district had the second largest planted area of sweet potatoes (3,622ha) or 19.5 percent of the total area planted with the crop in the region. Nzega was one of the two districts in the region which didn't grow Irish potatoes. The district was among the lowest beans producers in the region with a planted area of 422ha. Oil seed crops were very important and the district had the largest area planted with groundnuts (24,970 ha). Vegetables were also produced in the district. The area planted with tomatoes was 200 ha and onion 119 ha. Traditional cash crops such as tobacco and cotton were grown on 517 ha and 1,631 ha respectively.

Compared to other districts in the region, Nzega had the third largest area planted with permanent crops (3,723 ha) dominated by mango (389ha), oranges (118ha) and sugarcane (81ha). Other permanent crops were either not grown or were grown in very small areas.

With regard to asset ownership, most of the households owned hand hoes (39.5%) followed by machet commonly known as panga/ mundu (15.7%) and cows (14.4%). Other assets were of minor importance.

The use of inputs in the region was very small, however district differences did exist. Nzega had the second smallest planted area with improved seeds (8,411 ha, 7.9%) in the region. The district had the largest planted area (16,968 ha, 31.8%) with organic fertilizers and had the fifth largest planted area (1,496 ha, 2%) with inorganic fertilizers during the long rainy season. Compared to other districts in the region, Nzega district had a small level of insecticide use (3.8%). The use of fungicides was very small (0.1% of the total district planted area) as compared to other districts. The use of herbicides was also small (0.2% of the total district planted area). The district had the second largest area with irrigated land (7,000 ha). The most common sources of water for irrigation were the lake (1,379 hh) and the river (1,179 hh) using hand bucket and gravity as the common means of irrigation water application.

The most common method of crop storage was in sacks / open drums followed by storing in locally made traditional structures, however, 100 percent of the households stored their crops. The district was the second with the least number of households which sold crops (67%). Although small, access to credit in the district was mostly to men (83%) and the main sources were family friends/relatives (33%), NGOs/Development projects (33%) and cooperatives (17%).

A relatively large number of households (52% for crops and 34% for livestock) received extension services in Nzega and the largest part (91 percent for crops and 95% for livestock) was from the government. The quality of extension services was rated between good and average by the majority of the households. The district had the second highest proportion of households (4.2%) with erosion control and water harvesting structures, mostly erosion control bunds.

The district had the second largest number of cattle (490,660 heads, 23%) in the region and almost all of them were indigenous. A total of 194,538 goats or 21 percent of the total regional goat population was reared in the district. Sheep production was moderate with 56,200 heads or 16 percent of the regional total was kept in the district. It had the largest number of pigs (6,226 heads, 24%) and had the largest number of chicken (727,061, 25%) in the region. Nzega district had small number of ducks, turkeys and donkeys. The district had the largest number of households which reported tick problems (32,030 hh, 35% of the regional total)) and it had the largest number of households de-worming livestock (27,117 hh, 32%) in the region. Fish farming was virtually not practiced in the district.

Nzega district had the second highest percentage of its households (19%) with no toilet facilities. The district had the highest percentage of its households (73%) owning bicycles, had 10 percent of its households owning vehicles and only 2 percent of its households owning TV/Video sets. It had a small number of households (393) using mains electricity. The most common source of energy for lighting was the wick lamp (84%) and almost all its households (97%) used firewood for cooking. The district had the largest percentage of its households (80%) with grass roofing and the second with the least percentage of its households (18%) having iron sheets as roofing material. The most common source of drinking water was the unprotected wells (51%). The district had the largest proportion of its households (84%) having three meals per day. The remaining 16 percent of its

households had one to two meals per day. The district had the second lowest percentage of its households (31%) that did not eat meat during the week prior to enumeration and was amongst the districts with the highest percentage of its households (47%) that did not eat fish in the same week; however, most of the households never had problems with food satisfaction.

4.2.2 Igunga

Igunga district had the third largest number of agricultural households in the region (57,402 hh, 20%). Most of its smallholders were involved in crop and livestock production (57%), followed by crop farming only (43%). It had a very small number of livestock only households and there were no pastoralists in the district.

The most important livelihood activity for smallholder households in the district was annual crop farming (56%), followed by off farm income (44%). Compared to other districts in the region, Igunga had the second lowest percentage of female headed households (13% of the total district heads of household). With an average household size of 7 members per household, it was slightly above the average for the region. Igunga had a comparatively moderate literacy rate of 62 percent among the smallholder households and this was reflected by the district having a moderate level of school attendance in the region. The literacy rate for the heads of household was the lowest (57%) in the region.

The district had the largest planted area (205,987 ha, 30%) in the region, and the largest average planted area per household (3.6ha). The district was important for maize production in the region and had the largest planted area (76,645 ha, 26%) and largest maize planted area per household (1.4 ha). The district had a moderate planted area of paddy in the region with 11,128 hectares. Had the largest planted area of sorghum (35880 ha) whilst cassava production was relatively low (84 ha) and a production of 91 tonnes equivalent to only 0.3 percent of the total quantity harvested in the region. The district had the largest area planted with sweet potatoes (7,173 ha, 38.5%) and a very small planted area of Irish potatoes (57 ha). The production of beans in Igunga was almost negligible in the region. Igunga district had a moderate planted area with groundnuts (14,234 ha, 15%) and an area planted per household of 0.6 ha. Vegetable production was important in the district. It had the largest planted area (201 ha) with onion accounting for 55 percent of the total onion planted area in the region. Other vegetables were grown in small quantities. Cotton and tobacco were the cash crops grown in the district. The district had the largest area planted with cotton (50,499 ha, 87%). Tobacco production was almost negligible.

Compared to other districts in the region, Igunga had the least area planted with permanent crops (389 ha, 1.5%) dominated by mango (174 ha). Other permanent crops were either not grown or were grown in very small quantities.

The use of inputs in the region was very small however, district differences did exist. Igunga had the second largest planted area (31,000 ha, 29%) with improved seeds in the region. Also, the district had the second largest planted area with organic fertilizers (13,647 ha, 25.6%) and the least planted area with inorganic fertilizers (1,105 ha, 1.5%) during the long rainy season. Compared to other districts in the region, Igunga district had the third largest area of insecticide use (16,640 ha, 27.6%), the third largest area of fungicide use (1,399 ha, 15.8%) and the fourth largest area with herbicide use (689 ha, 8.9%). It had the fourth largest area (2,000 ha, 8.8%) with irrigation.

The most common source of water for irrigation was from lakes used by 1,276 households. Gravity was the most common means of irrigation water application and a small amount of bucket / watering can was also used.

The most common method of crop storage in Igunga was the locally made traditional structures, however, all the households (100%) stored crops in the district. Also, about 67 percent of the households sold crops.

Although very small, access to credit in the district was mostly directed to men (92% of those who accessed credit) and the main sources were the cooperatives, family friends and relatives.

A comparatively large number of households (75%) received crop extension services and 54 percent received livestock extension services, most of them (92% for crops and 90% for livestock) were from the government. The quality of extension services was rated between good and very good by the majority of the households. Igunga had the second smallest number of water control bunds (2,126, 3%) in the region.

The district had the largest number of cattle in the region (685,701 heads, 32%), most of which were indigenous. Goat and sheep production was also the highest compared to other districts. Pigs were virtually absent and the district had the third largest number of chicken (552,615, 19%) in the region, most of which were indigenous. The district had the largest number of guinea pigs (1,417) and donkeys (4,110), however, no turkeys and rabbits were reared in the district. A number of

households reported tsetse and tick problems in the district. Deworming of livestock was also practiced. There was no fish farming in the district.

Igunga district had the highest percentage of households without toilet facility (22%) and it was among the districts with the highest percentage of households owning radios and iron. The district had the second highest percentage of households owning bicycles (77.5%) and had a relatively high percentage of households owning mobile phones (28.4%), and vehicles (3.2%), wheelbarrows (7.9%) and televisions/videos (1.5%). The most common source of drinking water during the dry season was the unprotected wells (27%) and protected wells (4%). It was one of the districts with the highest percentage of its households having three meals per day (71%). The district had the second highest percentage of its households that did not eat meat (45%) and had the second highest percentage of its households that did not eat fish (50%) during the week prior to enumeration (50%), however, some of its households (40%) never had problems with food satisfaction and 27 percent seldom had problems with food satisfaction.

4.2.3 Uyui

Uyui district had the fourth largest number of agricultural households (50,937 hh, 18%) in the region. Most of its smallholders (60%) were involved in crop farming only, followed by crop and livestock production (40%). It had no livestock only households and no pastoralists.

The most important livelihood activities for smallholder households in the district were annual crop farming (50%) and off-farm income (46%). Compared to other districts in the region, Uyui had a relatively low percentage of female headed households (11%). With an average household size of 7 members per household it was above the regional average. Uyui had a comparatively high literacy rate (69%) among its smallholder households; this was reflected by the relatively high level of the population attending schools in the district. The literacy rate for the heads of household was the second highest (76%) compared to other districts in the region. The district had the fourth largest total planted area (118,163 ha, 17%) with an average of 2.3 hectares per household.

The district was important for maize production in the region and had a planted area of 53,551 ha, with an average planted area per household of 1.1 ha equivalent to the regional average. Paddy production was also important with a planted area of 15,024 hectares or 15 percent of the total paddy production in the region. Sorghum was less important with a planted area of 5,575 hectares (12%). Onion and chick peas were not planted in the district. The district had a moderately large

planted area (4,338 ha) of cassava accounting for 19 percent of the total cassava planted area in the region. The production of beans (1,255 tonnes) was much lower than that of Urambo and Sikonge districts but higher than other districts in the region with a planted area of 1,943 ha (20%). Oilseed crops were important in Uyui with 21,351 ha or 22 percent of the total area planted grown with groundnuts in the region. A very small area (1,635 ha) of cotton was planted in the district. The district had the second largest planted area with tobacco (8,618 ha, 27.4%). Permanent crops were relatively important in the district. About 18.9 percent of the total permanent crop planted area in the region was in the district. The most prominent permanent crops include; mango (316 ha), orange (126 ha) and sugarcane (99 ha). Other permanent crops were either not grown or were grown in very small areas.

The use of inputs in the region was very small however, district differences did exist. Uyui had the third largest planted area (21,800 ha) with improved seed in the region. The district had the third largest planted area with organic fertilizers (11,902 ha) and the second largest planted area with inorganic fertilizers (20,589 ha) during the long rainy season. Compared to other districts in the region, Uyui district had the third largest area (13,490 ha) of insecticide use and had the second largest area of fungicide use (1,617 ha). The most common source of water for irrigation was the lakes using hand bucket. Bucket/watering can was the most common means of irrigation water application and a small amount of gravity irrigation was used.

The most common method of crop storage in Uyui was the sacks and open drums; however, the number and proportion of households which stored crops in the district was very high (50,560 hh, 99%). The district had the third highest percentage of households selling crops (83%) during the long rainy season; however, for those who did not sell, the main reason for not selling was the fact that the open market price was too low. Although very small, access to credit in the district was mostly to men (96% of those who accessed credit) and the main sources were cooperatives, family friends and relatives. A total of 7,420 households (14.6%) were able to access credit.

A comparatively moderate number of households (66% for crops and 37% for livestock) received extension services in the district and most of the services were from the government (75% for crops and 93% for livestock). The quality of extension services was rated between good and very good by the majority of the households.

The district had a moderate number of cattle (426,361 heads, 20%) in the region and almost all of them were indigenous. Goat and sheep production was moderate compared to other districts. It had the least number of pigs (1,006 pigs, 4%) in the region and the fourth largest number of chicken (529,241 chicken, 18%) most of which were indigenous.

A number of households reported tsetse and tick problems in the district. De-worming of livestock was also practiced. A moderate number of households (252 hh, 39%) practiced fish farming in the region.

Uyui district had a moderate percentage of its households with no toilet facilities (2,893 hh, 6%) and it had the fourth largest number of its households owning vehicles (1,761 hh, 3.5%) and had the third largest number of its households owning mobile phones (22,513 hh, 4.4%). It had the largest number of its households owning wheelbarrows (6,289 hh, 12.3%). The most common source of energy for lighting was the wick-lamp (84%) and practically, almost all the households (94%) used firewood for cooking. The district had a high percentage of households (64%) with grass roofs while 20.7 percent of the households used iron sheets as roofing material. The most common source of drinking water during the dry season was the unprotected wells (60%). About 71 percent of the households in the district reported having three meals per day and the rest (29%) were having one to two meals per day. The district had the third highest percentage of its households (31%) that did not eat meat and 40 percent of the households that did not eat fish during the week prior to enumeration; however, 48 percent of the households reported to have no food insufficiency.

4.2.4 Urambo

Urambo district had the second largest number of agricultural households (62,000 hh, 21.5%) in the region. Most of its smallholders (73%) were involved in crops only farming, followed by crops and livestock production (27%). There were no households involved in livestock only and no pastoralists.

The most important livelihood activity for the smallholder households in the district was annual crop farming (53%) followed by off-farm income (45%). Compared to other districts in the region, Urambo district had a relatively low percentage of female headed households (15%). Its average household size of 6 members per household was relatively higher than the regional average.

Urambo district had a comparatively high literacy rate of 65 percent among its smallholder households reflected by a relatively high level of school attendance in the district.

The total planted area was 133,001 ha or 19.3 percent of the total area planted with annual crops and vegetables in the region; however, it had the second lowest planted area per household (2.2 ha) which attributes the high number of smallholders in the district.

Urambo district for important for maize production in the region and had a planted area of 59,735 ha or 20 percent of the total planted area with maize, however the planted area per household was among the lowest (1.0 ha/hh) in the region. Paddy production was also more or less important with a planted area of only 17,416 hectares (18%) while the production of sorghum was comparatively small (893 tonnes) or 2 percent of the regional total.

The planted area with cassava was the largest (10,347 ha, 46%) in the region. The district had the second with largest area planted with groundnuts (23,747 ha, 24%). Vegetable production was not very important in the district. The most important vegetable produced was tomato (967 tonnes) followed by onion (63 tonnes). Other vegetables were produced in very small quantities. The district had the largest area planted with tobacco (16,517 ha, 53%) in the region. Cash crops such as cotton were grown in small quantities.

The district had the largest area (11,734 ha) planted with permanent crops (44.3% of the total permanent crops planted area in the region). The most prominent permanent crops planted in the district include; palm oil (508 ha), mango (439 ha), banana (240 ha) and orange (154 ha).

The use of inputs in the region was very small; however, district differences did exist. The district had the largest planted area with improved seeds (33,566 ha, 25.2% of the total planted area with improved seeds in the district). The district had the largest planted area with inorganic fertilizers (36,886 ha, 27.7% of the total area planted with inorganic fertilizers in the district) and had the fifth largest area (4,050 ha, 3% of the total area planted with organic fertilizers in the district). Urambo district had the largest area (18,338 ha, 13.8% of insecticide use in the district and the largest area (4,540 ha, 3.4% of fungicide in the district) and the third largest area (877 ha, 0.7% of herbicide use in the district). The most common source of water for irrigation was from wells using hand bucket. Bucket/watering cans was the most common means of irrigation water application.

The most common method of crop storage in Urambo was the sacks and open drums; however, 99 percent of the households stored crops in the district. The district had the highest percentage of

households selling crops (93%) during the long rainy season; however, for those which did not sell, the main reason for not selling was the fact that the open market price was too low. Although small, access to credit in the district was mostly to men (99% of those who accessed credit) and the main sources were co-operatives. Urambo district had the largest proportion and number of households (14,849 hh, 24%) which received agricultural credits in the region.

A comparatively high number of households (68% for crops and 29% for livestock) received extension services in the district most of which were from the government (83% for crops and 81% for livestock). The quality of extension services was rated between good and very good by the majority of the households.

The district had a moderate number of cattle (256,573 heads, 12%) in the region and all of them (100 percent) were indigenous. Goat and sheep production was moderate at 12 and 3 percent respectively of the regional production. It had the second largest number of pigs (5,668 heads, 22%) in the region and the second largest number of chicken (637,604 flock, 22%), all of which were indigenous.

The number of households in the district which reported tick problem was relatively large (25%) but was the second with smallest percentage (4%) of its households which reported tsetse problems in the region. De-worming of livestock was also practiced. Fish farming was practiced by 306 households or 47 percent of the total fish farmers in the region.

Urambo district had a relatively low percentage of its households (8%) with no toilet facilities and had the largest percentage of its households (75%) owning radio and had 21 percent of its households owning iron, 75 percent owning bicycle and 8.6 percent owning vehicles. The most common source of energy for lighting was the wick lamp (83% of the households) and practically, all the households (98%) used firewood for cooking. The district had the second highest percentage of households with grass roofs (75%) and had 21 percent of its households having iron sheets as roofing material. The most common source of drinking water was the unprotected wells (75%) during the dry season. About 60 percent of the households in the district reported having three meals per day and the rest (40%) were having one to two meals per day. The district was amongst the districts with the lowest percentage of households that did not eat meat (23%) or fish (21%) the week prior to enumeration; however, most of the households (55%) reported to have food satisfaction.

4.2.5 Sikonge

Sikonge district had the second lowest number of agricultural households (22,514 hh, 8%) in the region. Most its smallholders were involved in crop farming only (67%), followed by crop and livestock production (33%). Very few or negligible number of households were involved in livestock only and pastoralists were virtually absent. The most important livelihood activity for smallholder households in the district was annual crop farming (53%) followed by off-farm income (45%) and livestock keeping / herding (2%). Compared to other districts in the region, Sikonge district had a relatively low percentage of female headed households (13 %). Its average household size of 7 members per household was higher than the regional average. Sikonge district had a comparatively high literacy rate (70%) among the smallholder households, reflected by the relatively high level of school attendance in the region. The literacy rate for the heads of household was the highest (77%) in the region. The total planted area was relatively small (52,361 ha, 8%) in the region; however, it had the second largest planted area per household (2.3 ha) attributed to the small number of smallholders in the district.

Sikonge district was less important for maize production in the region with a planted area of 24,017 ha or 8 percent of the total maize planted area but had the second largest planted area per household (1.1 ha) in the region. Paddy, cassava and groundnuts production were relatively important with a planted area of only 3,443 hectares (3%), 2,160 hectares (10%) and 9,259 hectares (10%) respectively.

The production of beans was also important in the district, it had the second largest planted area with beans (2,249 ha, 23%) in the region. However, vegetable production was not very important in the district. Sikonge district had moderate planted areas of tobacco (5,323 ha, 17%) and sunflower (3,200 ha, 21%).

The district had the second smallest area (2,332 ha) planted with permanent crops (9% of the total permanent crops planted area in the region). The most prominent permanent crop in the district was mango (97 ha) followed by banana (51 ha) and oranges (22 ha). Other permanent crops were either not grown or were grown in very small areas.

The use of inputs in the region was very small; however, district differences did exist. Sikonge had the fourth largest planted area (8,408 ha, 8%) with improved seeds in the region. The district had

the second largest planted area with inorganic fertilizers (10,665 ha, 20%) and had the second least planted area (4,244 ha, 8%) with organic fertilizers during the long rainy season. Compared to other districts in the region, Sikonge district had the fifth largest area planted using insecticide (4,100 ha, 8% of the total planted area in the district), fungicide (557 ha, 1%) and herbicide use (2,070 ha, 4%). The most common source of water for irrigation was the wells using hand bucket. Bucket/watering cans was the most common means of irrigation water application.

The most common method of crop storage in the district was the sacks and open drums. The proportion of households which stored crops in the district was 99 percent. The district had the second highest percentage (85%) of its households which sold crops; however, for those which did not sell, the main reason for not selling was the fact that the open market price was too low.

Although small, access to credit in the district was mostly to men (87% of those who accessed credit) and the main source was co-operatives. Sikonge district had the third largest number of households (2,891 hh, 11%) which received agricultural credits in the region.

A relatively small number of households (25%) received crop extension services and 6 percent received livestock extension services in the district and most of these services were from co-operatives (36% for crops) and from government (80% for livestock) and NGOs/Dev. Projects (32% for crops and 12% for livestock). The quality of extension services was rated between good and very good by the majority of the households.

The district had the fifth largest number of cattle (205,238 heads, 10%) in the region and almost all were indigenous. Goats were 67,208 heads (7%) and sheep were 25,905 heads or 7% of the total population in the region. Pig rearing in Sikonge had a population of 3,113 pigs (12%), had the second smallest number of chicken (296,405 or 10%). Also, the district had a very small number of ducks, turkeys, rabbits and donkeys. The number of households which reported tick problem was relatively moderate (4,447 hh, 23%) but the district had a small number of households (10%) which reported tsetse problems in the district. De-worming of livestock was also practiced by at 25% of the district smallholders. Very small number of households practiced fish farming (56 hh, 9% of the district agricultural households).

Sikonge district had a high percentage of its households (11%) with no toilet facilities. It had 29 percent of its households owning iron, 76 percent owning radio, 4 percent owning wheelbarrow, 3 percent owning television/video, 35 percent owning mobile phones and 72 percent owning bicycle.

Sikonge district had a small number of households (111 hh, 0.5%) using mains electricity for cooking. The most common source of energy for lighting in the district was the wick lamp used by 77 percent of its households and practically all households (92%) used firewood for cooking. The district had a high percentage of its households with grass roofs (66%) and 28% percent of its households used iron sheets as roofing material. The most common source of drinking water was the unprotected wells (64%) during dry season. About 67 percent of the households in the district reported having three meals per day and the rest were having one to two meals per day. The district had the third smallest percentage (47%) of its households that did not eat meat during the week prior to enumeration and had the highest percentage of its households (58%) that did not eat fish in the same week; however, most of its households never had problems with food satisfaction.

4.2.6 Tabora Urban

Tabora Urban district had the lowest number of agricultural households (16,011 hh, 5.6%) in the region. Most of the smallholders were involved in crops only farming (76%), followed by crops and livestock production (24%). Very few or no households were involved in livestock only. Also, pastoralists were virtually absent.

The most important livelihood activity for the smallholder households in the district was annual crop farming (49%) followed by off-farm income (49%) and livestock keeping (2%). Compared to other districts in the region, Tabora Urban had the highest proportion of female headed households (17%). It had an average household size of 6 members per household, the same as that of the region. The district had the highest literacy rate (72%) among its smallholder households. The literacy rate for the heads of household was 76 percent.

The total planted area with annual crops was 24,724 ha or 3.6 percent, which was the smallest in the region. It also had the smallest planted area per household (1.5 ha). Tabora Urban was not very important for maize production in the region, it had a planted area of 12,707 hectares equivalent to 4 percent of the total maize planted area in the region. It had the least maize planted area per household (0.8 ha) in the region. Paddy production was also less important with a planted area (4,482 ha, 5%). A very small area (104 ha, 0.2%) was planted with sorghum while the production of bulrush millet was virtually absent.

Cassava production was relatively moderate accounting for 16.5 percent of the total quantity (28,947 tonnes) harvested in the region. The district had the smallest planted area of sweet potatoes

(1,413 ha, 6%). The production of beans occupied the smallest area in the region with a planted area of only 408 ha (4%). It had the second least planted area with tomatoes (150 ha, 15%) and a small planted area of onions (22 ha, 6%) and amaranths (11 ha, 10%) in the region.

Tabora Urban had the second smallest planted area (3,300 ha, with permanent crops, (12.5% of the total permanent crops planted area in the region). The most important permanent crop in the district was mango (305 ha) followed by palm oil (67 ha), orange (66 ha), coconut and banana each with 62 hectares.

The use of inputs in the region was very small; however, district differences did exist. Tabora Urban had the smallest planted area (2,652 ha, 2.5%) with improved seeds in the region. The district had the smallest planted area with organic fertilizers (2,528 ha, 4.7%) and the third smallest area planted with inorganic fertilizers (2,341 ha, 9.5%) in the region. Compared to other districts in the region, the district had the smallest area of insecticide use (1,937 ha, 7.8% of the total planted area in the district), fungicide (639 ha, 2.6%) and herbicide (72 ha, 0.3% of the total planted area in the district). The most common source of water for irrigation was the canal using hand bucket. Bucket/watering cans was the most common means of irrigation water application.

The most common method of crop storage in the district was the sacks and open drums followed by locally made traditional structures. The proportion of households which stored crops in the district was 100 percent. The district had the least percentage of its households which sold crops (62%); however, for those which did not sell, the main reason for not selling was the fact that the open market price was too low. Although small, access to credit in the district was mostly to men (100% of those who accessed credit) and the main sources were co-operatives (80%) and family friends/relatives (20%). Tabora Urban had the smallest number of households (198 hh, 1.2%) which received agricultural credits in the district.

About 82 percent of the households received crop extension services and 50% livestock extension services in the district and most of the services were from the government (95% for crops and 95% for livestock).

The district had the smallest number of cattle (68,549 heads, 3.2%), goats (41,867 heads, 4.4%), sheep (6,128 heads, 1.7%) and pigs (2,332 heads, 9.1%) in the region and almost all were indigenous. It had the least number of chicken (196,555 chicken, 6.7%). A number of households reported tsetse (593 hh, 5%) and tick (2,372 hh, 19.7%) problems in the district. De-worming of livestock was also practiced by 3,281 households (27.2%) in the district. Very small number of households (40 hh, 0.2%) practiced fish farming in the district.

Tabora Urban had the lowest percentage (3%) of its households with no toilet facilities. It had 39 percent of its households owning mobile phones, 82 percent owning radio, one percent owning landline phones, 9 percent owning wheelbarrows, 29 percent owning iron and 69 percent owning bicycles. The most common source of energy for lighting was the wick lamp used by 84% of the households in the district and a large number of the households used firewood for cooking (94%). The district had the second lowest percentage of households with grass roofs (65%) and 31 percent used iron sheets as roofing material. The most common source of drinking water was the unprotected wells (68%) during the dry season. About 51 percent of the households in the district reported having three meals per day and the rest were having one to two meals per day. The district had the second largest percentage of its households (41%) that did not eat meat during the week prior to enumeration and the second lowest percentage of its households (28%) that did not eat fish in the same week; however, 43 percent of its households never had problems with food satisfaction.

APPENDICES

Appendix I: TABULATION LIST	98
Appendix II: TABLES.....	110
Appendix III: QUESTIONNAIRE	237

Appendix I: TABULATION LIST

TYPE OF AGRICULTURAL HOUSEHOLDS.....	109
2.1: Number of Households by type of Household and Region during 2007/08 Agricultural Year ...	110
2.2 : Number of Agriculture Households by type of Holding by District during 2007/08 Agricultural Year	110
2.3 : Number of Agriculture Households By Type and Size of Holding, 2007/08 Agricultural Year	111
2.4 : Number of Agriculture Households By Type and Size of Holding, 2007/08 Agricultural Year	111
HOUSEHOLD DEMOGRAPHICS	112
3.1 Number of Heads of Agricultural Households by sex of head and District, 2007/08 Agricultural Year	113
3.2: Number of Household Members classified by District and Sex	113
3.3 : Number of Agricultural Household Members By Sex and Age Group, 2007/08 Agricultural Year	113
3.4 Number of Heads of Agricultural Households by Marital Status, sex of head and District, 2007/08 Agricultural Year	114
3.5 Number of Heads of Agricultural Households by Survival of Female Parent, sex of head and District, 2007/08 Agricultural Year	115
3.6 Number of Heads of Agricultural Households by Survival of Male Parent, sex of head and District, 2007/08 Agricultural Year	116
3.7: Number of Household Members Who Can Read and Write languages by type of language and District.....	117
3.8 Number of Heads of Agricultural Households By Status of writing and reading Languages, sex of head and District, 2007/08 Agricultural Year	118
3.9: Number of Agricultural Household Members Five Years and Above reporting Literacy levels by Sex of Member and District, 2007/08 Agricultural Year.....	119
3.10: Number of heads of Agricultural households reporting Literacy levels by Sex of Member and District, 2007/08 Agricultural Year	120
3.11: Number of Household Members by Education Status and District.....	120
3.12: Number of Heads of Agricultural Households by Education Status, sex of head and District, 2007/08 Agricultural Year	121
3.13: Number of Agricultural Household Members By Level of Formal Education Completion and District, 2007/08 Agricultural Year	122

3.14: Number of Agricultural Household Members By Level of involvement in Farming Activity and District, 2007/08 Agricultural Year	124
3.15: Number of Agricultural Household Members By Main Activity and District, 2007/08 Agricultural Year	124
3.16: Number of Heads of Agricultural Households by Main Activity and District, 2007/08 Agricultural Year	126
LAND ACCESS AND LAND USE	127
4.1 : Number of Farming households by type of land Ownership/Tenure and District for the 2007/08 Agriculture Year.....	128
4.2 : Area of land (ha) by Ownership/Tenure and District for the 2007/08 Agriculture Year	128
4.3: Number of Agriculture Households by whether all Land Available to the Household was Used during 2007/08 Agriculture Year by District.....	129
4.4 : Number of Agriculture Households by Whether they Consider Having Sufficient Land for the Household and District during 2007/08 Agriculture Year.....	129
4.5 : Number of Agriculture Households By Whether Female Members of the Household Own or Have Customary Right to Land by District during 2007/08 Agriculture Year	129
4.6 : Number of Agriculture Households by Type of Land Use and District for the 2007/08 Agriculture Year	130
4.7 : Area of Land (ha) by land use and District for the 2007/08 Agriculture Year.....	130
CROP OWNERSHIP	131
5.1: Number of Household members owning most of the crop by Sex of the Main Owner, Season and District for the Agriculture Year 2007/08.....	132
5.2: Planted Area by District, Season and Sex of Household Members owning most of the crop for the 2007/08 Agriculture Year	132
ANNUAL CROP AND VEGETABLE PRODUCTION BY DISTRICT- SHORT AND LONG RAIN SEASON	133
5.3: Number of Crop Growing Households and Area Planted (ha) by Season and District.....	134
5.4: Number of crop growing Households Planting Crops by Season and District	134
5.5: Number of Agricultural Households, Area Planted (ha) and Quantity Harvested (tonnes) during Short & Long Rainy SEASON by District, 2007/08 Agricultural Year	135
CROP PRODUCTION GENERAL	142
5.6: Number of Agriculture Households by Area Planted (ha) and crop for the Agriculture Year 2007/08 Short and Long Season-Tabora.....	143

5.7: Area planted (ha) and Quantity Harvested by Season and Crop for the 2007/08 Agriculture Year ..	144
CROP STORAGE AND MARKETING	145
5.8 : Number of households Storing Crops by Season and District	146
5.9: Number of Crop Producing households reporting Selling agricultural produce during 2007/08 by District and Season.....	146
5 :10 Number of Households Reporting Marketing Problems for agricultural products by Crop during Long Rainy Season - TABORA REGION	147
INPUT USE BY DISTRICT-LONG RAINY SEASON.....	149
5.11: Number of Households and Planted Area by Organic Fertilizer Use and District.....	150
5.12: Number of Households and Planted Area by Inorganic Fertilizer Use and District	150
5.13: Number of Households and Planted Area by Fungicide Use and District	150
5.14: Number of Households and Planted Area by Herbicide Use and District.....	151
5.15: Number of Households and Planted Area by Insecticide Use and District	151
5.16: Number of Households and Planted Area by Improved Seed Use and District	151
5.17 : Number of crop Growing Households and Planted Area (hectare) by Local Seed Use and District; 2007/08 Agriculture Year	152
INPUT USE BY CROP- LONG RAINY SEASON	153
5.18: Planted Area & Number of Crop Growing Households by Herbicide Use and Crop for the 2007/08 Agriculture Year - - TABORA REGION	154
5.18a: Planted Area and Number of Crop Growing Households by Fungicide Use and Crop for the 2007/08 Agriculture Year	155
5.19: Planted Area and Number of Crop Growing Households by Insecticide Use and Crop for the 2007/08 Agriculture Year	156
5.20: Planted Area and Number of Crop Growing Households by Organic Fertilizer Use and Crop for the 2007/08 Agriculture Year.....	157
5.21: Planted Area and Number of Crop Growing Households by Inorganic Fertilizer Use and Crop for the 2007/08 Agriculture Year.....	158
5.22: Planted Area and Number of Crop Growing Households by Improved seed Use and Crop for the 2007/08 Agriculture Year	159
5.23: Planted Area and Number of Crop Growing Households by Local Seed Use and Crop for the 2007/08 Agriculture Year	160

PERMANENT CROPS	161
5.24: Number of Households Planting Permanent Crops by District , 2007/08 Agriculture Year.....	162
5.25: Planted Area and Area Harvested by Type of Planting and District	162
5.26: Area Planted, Area harvested, Quantity Harvested and Yield by Type of Permanent Crop	162
5.27: Mono and Mixed Crops by Area Planted, Area Harvested and Quantity Harvested, Type of Planting Crops and District	163
ACCESS TO AGRICULTURAL EQUIPMENTS/ASSETS	165
6.1: Number of Agricultural Equipment/Asset owned by type and District for 2007/08 Agriculture Year	166
6.2.: Number of Agricultural Households that Used Tractors/Draft animals to cultivate Land By Type and District for 2007/08 Agriculture Year	167
6.3: Number of Tractors/Draft animals Owned by Type and District for 2007/08 Agriculture Year	168
IRRIGATION	169
6.4: Number of Agriculture Households reporting use of Irrigation during 2007/08 Agricultural Year by District.....	170
6.5: Number of Agriculture Households using irrigation by Source of Irrigation Water by District during the 2007/08 Agricultural Year	170
6.6: Number of Agriculture Households by method of used to obtain water and District during 2007/08 Agriculture Year.....	170
SOIL EROSION CONTROL FACILITIES	171
6.7: Number of Households with Soil Erosion Problem on their Land By District	172
6.8: Number of Households with Erosion Control/Water Harvesting Facilities on their Land By District	172
6.9: Number of Erosion Control/Water Harvesting Structures by Type and District as of 2007/08 Agriculture Year.....	172
AGRICULTURE CREDIT	173
7.1: Number of Agriculture Households receiving Credit by District During the 2007/08 Agriculture Year	174
7.2 : Number of Credits by sex of the household Member receiving credits and District During the 2007/08 Agriculture Year	174
7.3: Number of Households receiving Credits by Main Source of credit and District During the 2007/08 Agriculture Year	175

7.4: Number of Households Reporting the Main reasons for Not Using Credit by District During the 2007/08 Agriculture Year	175
7.5: Number of Households receiving Credits by Main Source of credit B and District During the 2007/08 Agriculture Year	176
7.6: Number of Households receiving Credits by Main Source of credit C and District During the 2007/08 Agriculture Year	176
7.7: Provision of credit A by sex and District During the 2007/08 Agriculture Year	177
7.8 : Provision of credit B by sex and District During the 2007/08 Agriculture Year	177
7.9 : Provision of credit C by sex and District During the 2007/08 Agriculture Year	177
CROP EXTENSION SERVICES	178
8.1 : Number of Agriculture Households that received Crop Advice During the 2007/08 Agriculture Year	179
8.2 : Number of Agriculture Households Participated in Out Grower Agreement During the 2007/08 Agriculture Year.....	179
8.3 : Number of Agriculture Households Participated in Contract Production Agreement During the 2007/08 Agriculture Year	179
8.4 : Number of Agriculture Households By Source of Extension Messages By District During the 2007/08 Agriculture Year	180
8.5: Number of households receiving extension advice on Spacing by District during the 2007/08 Agriculture Year.....	180
8.6: Number of households receiving extension advice on Use of Agrochemicals by District during the 2007/08 Agriculture Year	181
8.7: Number of households receiving extension advice on Erosion Control by District during the 2007/08 Agriculture Year	181
8.8 CROP EXTENSION: Number of households receiving extension advice on Organic Fertilizer use by District during the 2007/08 Agriculture Year	182
8.9: Number of households receiving extension advice on use of Inorganic Fertilizer by District during the 2007/08 Agriculture Year.....	182
8.10 CROP EXTENSION: Number of households receiving extension advice on Use of Improved Seeds by District during the 2007/08 Agriculture Year.....	183
8.11: Number of households receiving extension advice on Mechanization and Labor Saving Technologies by District during the 2007/08 Agriculture Year	183
8.12: Number of households receiving extension advice on Irrigation Technologies by District during the 2007/08 Agriculture Year.....	184

8.13: Number of households receiving extension advice on Crop Storage by District during the 2007/08 Agriculture Year	184
8.14: Number of households receiving extension advice on Vermin Control by District during the 2007/08 Agriculture Year	185
CATTLE PRODUCTION.....	186
9.1: Total Number of Households Rearing Cattle by District during 2007/08 Agriculture Year	187
9.2: Number of Cattle by Type and District as of 1st October 2008	187
9.3: Total Number of Cattle by Cattle Breed and Economic Function, as of 1 st October 2008	187
9.4: Number of Households rearing cattle, Head of Cattle and Average Head per Household by Herd size as of 1st October 2008	188
9.5: Total Number of indigenous Cattle by Category of cattle and District as of 1st October 2008...	189
9.6: Total Number of Improved Beef Cattle by Category of cattle and District as of 1 st October 2008... ..	189
9.7: Total Number of improved Dairy Cattle by Category of cattle and District as of 1st October 2008.	190
9.8: Total Number Households rearing Cattle and Method of Cattle Identification by District during, 2007/08 Agricultural Year	190
9.9: Number of Milked Cows by Category of Cattle, Season and District, During the 2007/08 Agricultural Year	191
9.10: Average milk production per cow per day, by Category of Cow, Season and District, During the 2007/08 Agricultural Year	191
9.11: Average number of days for cows on milked, by category of Cattle, Season and District, During the 2007/08 Agricultural Year	191
9.12: Average Cattle Milk Price (Tshs/litre) per season by category of Cow and District, during the 2007/08 Agricultural Year	192
9.13: Average Cattle Milk price (Tshs/litre) per season by category of Cow and District, during the 2007/08 Agricultural Year	192
9.14: Number of Milked Cows, Average Milk Produced per Cow per Day, Average Number of Days for Cows on Milk and Average Price per Litre per Season and District during the 2007/2008 Agriculture Year.....	192
GOAT PRODUCTION	193
9.15: Number of Agriculture Households Rearing Goats by District during the 2007/08 Agricultural Year	194
9.16: Number of Goats by Type and District as of 1st October 2008	194

9.17: Number of Households Rearing Goats, Head of Goats and Average Head per Household by Herd Size as of 1st October 2008.....	194
9.18: Total Number of Goats by Category and Type of Goat as of 1st October 2008 - TABORA	195
9.19: Total Number of Indigenous Goat by Category and District as of 1st October 2008	195
9.20 : Number of Improved Goats for Meat by Category and District as of 1st October 2008	196
9.21: Number of Milked Goat by Category of Goat, Season type and District, During the 2007/08 Agricultural Year	196
SHEEP PRODUCTION.....	197
9.22: Number of Households Rearing Sheep by District during the 2007/08 Agriculture Year	198
9.23: Number of Sheep by Breed and District as of 1st October 2008	198
9.24: Number of households Rearing Sheep and number of sheep by District as of 1st October 2008... ..	198
9.25: Total Number of Indigenous Sheep by category and District as of 1st October 2008	199
9.26: Number of Households rearing Sheep, Head of Sheep and Average Head per Household by Herd size as of 1 st October 2008	199
9.27: Total Number of Sheep by Breed and Flock Structure as of 1st October 2008	199
PIGS PRODUCTION.....	200
9.28: Number of Households Raising Pigs by District during 2007/08 Agriculture Year	201
9.29: Number of Households Rearing Pigs, Head of Pigs and Average Head per Household by Herd Size as of 1st October 2008 - TABORA.....	201
9.30: Total Number of Pigs by Herd structure and District as of 1st October 2008	201
9.31 : Number of Pigs per Household by District as of 1st October 2008	202
CHICKEN AND OTHER LIVESTOCK PRODUCTION	203
9.32: Number of CHICKEN by Type and District as of 1st October 2008.....	204
9.33 : Number of Households Keeping Chickens and Average Number of Chickens per Household by Flock Size as of 1st October 2008	204
9.34: Number of Other Livestock by Type of livestock and District as of 1 st October 2008.....	205
9.35 : Total Number of Other Livestock by Type as of 1st October 2008	205
PESTS AND PARASITES	206
9.36: Number of Livestock Rearing households deworming Livestock by region during 2007/08 Agriculture Year.....	207

9.37: Number of Livestock Rearing households that dewormed Livestock by type of livestock and District, 2007/08 Agriculture Year	207
9.38: Number of Livestock Rearing Households Normally Encountering Tick Problems by District during 2007/08 Agriculture Year	208
9.39: Number of Livestock Rearing Households by Method of Tick Control and District during 2007/08 Agriculture Year	208
9.41: Number of Livestock Rearing Households by Method of Tsetse Flies Control and District during 2007/08 Agriculture Year	208
9.42: Number of Livestock Rearing Households normally Encountering Newcastle Disease Problems by District during 2007/08 Agriculture Year	209
9.43: Number of Livestock Rearing Households by Method of Newcastle Disease Control and District during 2007/08 Agriculture Year	209
9.44: Number of Livestock Rearing Households normally Encountering Fowl Typhoid Disease Problems by District during 2007/08 Agriculture Year	209
9.45: Number of Livestock Rearing Households by Method of Newcastle Disease Control and District during 2007/08 Agriculture Year	210
9.46: Number of Livestock Rearing Households normally Encountering Foot and Mouth Disease Problems by District during 2007/08 Agriculture Year	210
9.46: Number of Livestock Rearing Households normally Encountering Lymphskin Disease Problems by District during 2007/08 Agriculture Year	210
LIVESTOCK EXTENSION SERVICES	211
9.47: Number of households receiving extension advice by District during the 2007/08 Agriculture Year	212
9.48: Number of Households receiving Livestock advice (overall) By Source of Extension and District during the 2007/08 Agriculture Year	212
9.49: Number of Agriculture Households Receiving Advice on Feeds and Proper Feeding by Source and District During 2007/08 Agriculture Year	213
9.50: Number of Agriculture Households Receiving Advice on Feeds and Proper Livestock Housing by Source and District During 2007/08 Agriculture Year	213
9.51: Number of Agriculture Households Receiving Advice on Proper Milking and Milk Hygiene and District During 2007/08 Agriculture Year	214
9.52: Number of Agriculture Households Receiving Advice on Livestock fattening and District During 2007/08 Agriculture Year	214
9.53: Number of Agriculture Households Receiving Advice on Disease control (dipping/spraying) and District During 2007/08 Agriculture Year	215

9.54: Number of Agriculture Households Receiving Advice on Herd/Flock size and selection by District During 2007/08 Agriculture Year	215
9.55: Number of Agriculture Households Receiving Advice on Group formation and strengthening by District During 2007/08 Agriculture Year	216
9.56: Number of Agriculture Households Receiving Advice on Calf rearing by District During 2007/08 Agriculture Year.....	216
9.57: Number of Agriculture Households Receiving Advice on improved Bulls by District During 2007/08 Agriculture Year	217
9.58: Number of Agriculture Households Receiving Advice on Livestock Feeds processing by District During 2007/08 Agriculture Year	217
FISH FARMING	218
9.59: Number of Agriculture Households Practicing Fish Farming by District during the 2007/08 Agriculture Year.....	219
9.60: Number of Agriculture Households by System of Fish Farming and District during the 2007/08 Agriculture Year.....	219
9.61: Number of Agriculture Households by Source of Fingerling and District during the 2007/08 Agriculture Year.....	219
9.62: Number of Agriculture Households by Location of Selling Fish and District during the 2007/08 Agriculture Year.....	219
9.63: Total Number of Fish Harvested, their weight and Quantity Sold by District during 2007/08 agriculture year.....	220
9.64: Total Number of Stocked Fish by Type and District during 2007/08 Agriculture Year.....	220
9.65: Number of Agricultural Households By frequency of stocking of Fingerings in fish ponds and District, 2007/08 Agricultural Year	220
9.66: Number of Agricultural Households By level of care of fish ponds and District, 2007/08 Agricultural Year	220
BEE KEEPING	221
9.67: Number of Agricultural Households involved in Honey Production/Collection and District, 2007/08 Agricultural Year	222
9.68: Number of Agricultural Households By Honey production/Collection and District , 2007/08 Agricultural Year	222
9.69: Number of Agricultural Households, Number of Bee hives by Type, Size of Bees and District during the 2007/08 Agriculture Year	223
9.70: Quantity of Honey Harvested and Sold by Size of Bees and District during the 2007/08 Agriculture Year.....	223

9.71: Average price of Honey (Tshs/litre) by Size of Bees and District during the 2007/08 Agriculture Year	224
9.72: Number of Agriculture Households by Location of Selling Honey and District during the 2007/08 Agriculture Year	225
HOUSEHOLDS FACILITIES	226
10.1 : Number of households reporting average number of rooms and type of building Materials and District, 2007/08 Agricultural Year	227
10.2 : Number of households Reporting Average Number of Rooms, type of Floor Materials and District, 2007/08 Agricultural Year	227
10.3: Number of households by type of Wall Materials and District, 2007/08 Agricultural Year	228
10.4 : Number of Agricultural Households reporting ownership of Assets by District, 2007/08 Agricultural Year	228
10.5 : Number of Agricultural Households Reporting Main Source of Energy for Lighting by District, 2007/08 Agricultural Year	229
10.6: : Number of Agricultural Households Reporting Main Source of Energy for Cooking by District , 2007/08 Agricultural Year	230
10.7 : Number of Agricultural Households Reporting Main Source of Drinking Water during Wet Season by District, 2007/08 Agricultural Year	230
10.8 : Number of Agricultural Households Reporting Distance to Main Source of Drinking Water during Wet Season by District, 2007/08 Agricultural Year	231
10.9 : Number of Agricultural Households Reporting Time Spent to and from Main Source of Drinking Water during Wet Season by District, 2007/08 Agricultural Year	231
10.10 : Number of Agricultural Households Reporting Main Source of Drinking Water during Dry Season by District, 2007/08 Agricultural Year	232
10.11: Number of Agricultural Households Reporting Distance to Main Source of Drinking Water during Dry Season by District, 2007/08 Agricultural Year	233
10.12 : Number of Agricultural Households Reporting Time Spent to and from Main Source of Drinking Water during Dry Season by District, 2007/08 Agricultural Year	233
10.13 : Number of Agricultural Households Reporting type of TOILET the household normally use by District, 2007/08 Agricultural Year	234
10.14 : Number of Agricultural Households Reporting Number of meals the household normally has per day by District, 2007/08 Agricultural Year	234
10.15 : Number of Agricultural Households Reporting Number of days the household Consumed Meat during the Preceeding Week by District, 2007/08 Agricultural Year	235

10.16 : Number of Agricultural Households Reporting Number of days the household Consumed Fish during the Preceeding Week by District, 2007/08 Agricultural Year	235
10.17: Number of Agricultural Households Reporting the status of food satisfaction of the household during the Preceding Year by District, 2007/08 Agricultural Year	236
10.18 : Number of Agricultural Households Reporting Main Source of Income by District, 2007/08 Agricultural Year	236

TYPE OF AGRICULTURAL HOUSEHOLDS

Appendix II: TABLES

2.1: Number of Households by type of Household and Region during 2007/08 Agricultural Year

District	Rural Households involved in Agriculture	% of Total Rural Households	Rural households NOT involved in Agriculture	% of Total Rural Households	Total Rural Households	% of Total Households	Number of Urban Households	% of Total Households	Total Number of Households

Definition and working page for page 1

General Definitions

Who is a Smallholder /Small Scale farmer?

Should have one or more of the following: in the 2007/08 farming season had one or more cultivated and planted farms. The farm land may either be owned, rented, borrowed. The farmer may also be raising 1 and 50 head of cattle, and/or between 5 and 100 head of sheep/Goats/Pigs, and/or between 50 and 1000

Household: A group of people who occupy the whole or part one or more housing units and makes joint provision for food and/or other household items. Usually such a group comprises a husband, wife, and their children. Other relatives may be members of the household if they happen to live and get food provisions from the same household. People who live together and eat from the same pot may be considered as members of the same household even if they stay in separate dwellings. An individual who lives and eat alone is considered as an independent household.

Household Head: A person who is acknowledged by all other members of the household either by virtue of his age or standing in the household as the head. He/she should be a permanent resident of the house and he/she is the main person responsible for decision making regarding use of household resources..

Agricultural Holding: This is an economic unit of agricultural production under single management. This unit may have been grown various crops. For the purpose of the survey, the agricultural holdings are restricted to those which meet one of the following conditions:

- Having or operated at least 25 sq meter of arable land
- Own or keep at least one head of cattle or five goats/sheep/five pigs or fifty chicken/ducks/turkeys during the agricultural year 2007/08 (from October 2007 to September 2008).

Question Specific Definitions:

Type of Agriculture holding Codes (Q2.1):

Crops only: A holding is referred to be a crop only holding if it has cultivated at least one piece of land. This also applies to all households owning or have kept livestock whose number does not qualify such households to be an agricultural holding (No cattle, less than 5 goats/sheep/pigs, less than 50 chickens/turkeys/rabbits).

Livestock only: A holding is referred to be a livestock only holding if it has exercised livestock husbandry only during the 2007/08 agricultural year.

NOTE

For agricultural holding only and pastoralist holding only; the number of livestock should be at least one head of cattle, not less than five goats/sheep/pigs, not less than 50 chickens /turkeys /rabbits. This also applies to households having or operated less than 25 sq meter of cultivated land (which does not qualify the household to be considered as agricultural holding) but has the number of livestock that makes the holding qualifies to be considered as livestock holding.

Pastoralist holding: This refers to a household which practices livestock production as its major income generating activity and a means of subsistence, but moves from one place to another searching for water and pasture for the livestock. This movement usually involves long distances and in many cases the whole household unit moves with the livestock and they have no permanent place of residence.

Both crops and livestock: A holding is referred to be a both crops and livestock if it has cultivated a piece of land equal or exceeding 25 sq meter and if such households have own or kept livestock whose number qualify such household be considered as an agricultural holding.

Procedures for questions:

Q 2.1 Type of agriculture household/holding

Using the options under the question classify the type of agriculture household/holding

Note: If the household had an acre of crops and raised 40 chickens during 2007/08, it is classified as 'Crops only' as the number of chickens does not qualify the household as a livestock holding.

Definition and working page for page 2

Question Specific Definitions:

Relation to head (Col 2):

Household Head: A person who is acknowledged by all other members of the household either by virtue of their age or standing as the household head.

Read and Write (Col 8)

Any other language: Must be a written language.

For someone who can read and write in Kiswahili and any other language apart from English, the correct code is 1. For one who can read and write in English and any other language apart from Kiswahili the the correct code is 2. Code 4 should only be used for any other language which is not English or Kiswahili.

Education Level Reached (Col 10):

Ask the respondent the highest educational level reached. This aims at establishing whether at the time of enumeration the member of the household is studying has completed or has never studied. Make further enquiry for the level of education reached for those who have completed studies. Establish if the member had attained any training after graduation for the purposes for completing column number 9. For those who still continue attending studies during the period of this survey, establish their learning stage. For instance for a household member who studied up to Standard Three but did not complete his/her education at this level, then his/her highest education level reached is Standard Two. For those indicated under code 3 (not studied) in column 8 should be marked code 99 (Not applicable) in column 9.

Section 3.0 Note

Make sure that you define the hh proper to ensure that all the members of the hh are included. Ensure that you stress that the hh is not just the hh heads direct family and that it includes other people living and eating together with the family.

If you notice that the hh is large or you see many people around the hh and you have been given a smaller number of the hh members, make further enquiries until you are sure that you have captured all the hh members.

Section 3.0 Household information.

- ii) For each household member complete columns 1,2,3 and 3
After completing columns 1, 2, 3 and 3 for each household member, go back to the first household member and complete the remaining columns for that member.
- iii) Repeat step 2 for the rest of the household members.

3.0 HOUSEHOLD INFORMATION													Identification			
3.1 Give details of personal particulars of all hh members beginning with hh head																
Na.	Names of hh members (Start with hh Head)	Ex Start with hh Head	Sex M = 1 F = 2	Age (98 years or more enter 97, under one year old write 00)	Marital Status	Parental Survival		Not applicable for children under 5 years

Others (specify)98

Off-farm Income (Col 13)

These are income made from activities NOT on the HH's farming activities. This can be from formal employment (e.g. in government etc.), temporary jobs, casual labourers and income generation activity and includes working for cash on other people's farms. Indicate whether each member was involved in an off farm income generating activity during 2007/08

Definitions and working page for page 3

Definitions for Key Specific Questions

Section 4.1 – Land Access/Ownership

These are areas that were used by the households for the 2007/08 farming season

Lease/Certificate of Ownership: Area under lease/certificate of ownership refers to the areas which were issued by the government. The household possesses government issued leasehold title or certificate of ownership. The land will normally be officially surveyed and boundaries marked. This includes leased land bought from others where the lease/certificate of ownership has been transferred.

Customary Law: This refers to the land which the household does not have an official government but its right of use is granted by the traditional leaders.

Bought: This refers to the areas of customary land that has been bought from others. This land does not have an official title and therefore is not leasehold.

Rented from others: Land rented from others for cash or for a fixed amount in crop produce (e.g. fixed number of bags at harvest).

Borrowed: use granted by land owner free of charge. Land owner can either be a lease holder or has right of access through customary law.

Share cropping: where the household is permitted to use land which is then paid for from a percentage of the harvested crop

Section 4.2 Land Use

Temporary crops: are sown and harvested during the same agricultural year

Permanent crops: are crops once sown or planted last for some years and need not to be replanted after each annual harvest.

Permanent crops /mixed crops: This is a mixture of permanent and seasonal crops. The two crops can either be randomly planted together or in a particular pattern e; for example intercropping (1 row of maize and 1 row of beans). A field that has been divided into plots for different crops is not mixed).

This is further subdivided into:

Mixture of Permanent crops – two or more permanent crops grown together

Mixture of Permanent and Temporary crops – permanent crop and annual crop together

Mixture of Temporary crops– two or more temporary, annual crops grown together

Pasture land: this is an area of owned/allocated land which is set aside for livestock grazing. It can be improved pasture where the farmer has planted grass, applied fertilized or where other means have been applied to improve the pasture. Or it can be natural pasture.

Natural Bush: Land which has naturally grown shrubs and trees and is considered productive but is not utilized for farming or livestock production.

Overview to section 4

Overview to section 4

Section 4.0: Preliminary note

Land Access/Ownership

Land access/ownership refers to the area utilized by the members of the household. This does not include communal land where the resources are shared between household members. It does not include official communal land that the household has sole access to for example a plot for crop farming in the communal area.

Procedures for questions

Section 4.0 – Land Ownership

1. Ask the respondent if he knows the total areas of land the household has sole access to. If he knows make a note in the calculation space
2. Ask the respondent the area of the different land ownership categories the household has sole access to (Q4.1, 1 to 4.1.7) and record in the appropriate spaces.
3. Add up the area of the different categories of land and compare it with the total area obtained in step 1 (if the respondent provided the information)
4. If the total area is different find out which one is correct and make

Section 4.2: Land Use

1. Ask the respondent the area of the different land use categories the household has sole access to (Q4.2.1 to 4.2.12) and record in the appropriate spaces.
2. Add up the area of the different categories of land and compare it with the total area obtained in section 4.0. The total area should be the same.
3. If the total area is different find out which one is correct and make amendments where appropriate.

4.0 LAND ACCESS/OWNERSHIP/TENURE		Identification <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>					
4.1 LAND ACCESS/OWNERSHIP/TENURE		Give details on Area owned by the household during 2007/08 agricultural season.					
Give area as reported by the respondent in acres		Area in Acre		4.1.8 Was the whole household area used during the 2007/08 agricultural season? (Yes=1, No=2) <input type="checkbox"/>			
4.1.1	Area under certificate of ownership	<input type="text"/>	<input type="text"/>	4.1.9 Do you consider to have enough land for your household? (Yes=1, No=2) <input type="checkbox"/>

Instructions for calculating the area of mixed crops in a mixture
A. If the mixed crop is mixed annual ly only enter the total area of the field in the remaining area under temporary Crop and go to step one of these instructions.
B. If the mixed crop is mixed permanent and annual try to work tyhe percent age taken by the different crops and calculate the area of annual crops outlined in step 1. Otherwise use the number of trees method to calculate the area of annula crops in the mix.
C: Number of trees method to calculate annual crop areas in a permanent-annual crop mix.:
 (i) List each of the permanent crop in column b and enter the ground area per acre for each permanent crop (from instructions for page 8) in column d.
 (ii) Enter the number of permanent trees in the mix in column e as will be provided to you by the respondent
 (iii) Calculate the area occpied by each crop by multiplying column d and collumn e and sum up these to obatin the total area of permanent crops in the mix.
 iv) To obatin the area for tempofrary crops , subtract (-) the area fro permanent crops from thne total area of crop mix and enter the result in in the total area under temporary crops.
 (v) Proceed to step 1 to calculate the area under each temporary crop.
1. Enter the name of each temporary crop in tyhe crop mix and estimate percentages of each crop.
2. Using the percentage for each crop, calculate the are for each crop from the remaining area under temporary crop.
3. After completing the excrise for all the fields, sum the area of each crop in tyhe mix plus any monocrops and uenter the totals in section 5.1.1 Collumn 3.
4. Once the quantity harvested is obtained , caklculate the yields (metric tonnes/acre) and compare the figures with the norms given in the crops code box. If there is significantly difference, check the area and the amount harvested..

5.2 ANNUAL CROPS AND VEGATBLE PRODUCTION-LONG RAINY SEASON CONTINUED ...															
5.2.1 Provide the following details for each crop planted during the short rainy season for 2007/08 agricultural year											Identification <input type="text"/>

Definitions and working page for page 5

Storage (Col. 30, Q 5.1.1):

- **Traditionally Made structures:** The design of storage structures villagers have inherited from forefathers .
- **Improved Traditionally made structures:** The design of traditional storage structures improved through modern technology.

Marketing Challenges Q 5.1.1 Col. 33:

- **Farmers' Association:** Village farmers who came together and started an association for the purposes of purchasing inputs/selling/storage of crops aiming at fetching better prices.
- **Cooperative Union:** A large inter-village/community set up in the district/ region or at national level for providing inputs, markets and storage of farmers' crops.
- **Government Regulatory laws for crops marketing:** Government instituted laws for regulating transportation and selling of crops.

Inputs (Q 5.1.1)

- Farm Yard Manure:** An organic fertilizer made on farm from animal dung. .
- Compost:** An organic fertilizer made on farm from decomposed plant materials.
- Insecticides:** This is the chemical used in protecting plants or killing pests.
- Fungicides:** Protects plants from fungi attack.
- Herbicide:** Chemicals used to control or kill weeds.
- Improved seeds:** Scientifically attested to be suitable for agricultural use.

Working area/calculation space

Questions specific definitions

Q 5.1.1. Instructions on crops storage:

1. For the listed crops establish whether or not the household stored crops for 2007/2008 agricultural season.
2. For the listed crops give explanations on storage.

Crops storage is keeping/reserving crops in a container or a special place for future use.

Q 5.1.1 Col 31

1. For each of crops listed indicate major marketing problems for 2007/2008 agricultural season.

Storage (Col. 30, Q 5.2.1):

- **Traditionally Made structures:** The design of storage structures villagers have inherited from forefathers .
- **Improved Traditionally made structures:** The design of tradional storagesrutures improved through modern technology.

Marketing Challenges Q 5.2.1 Col. 33:

- **Farmers' Association:** Village farmers who came together and started an association for the puporses of purchasing inputs/selling/storage of crops aiiming at fetching better prices.
- **Cooperative Union:** A large inter-village/community set up in the district/ region or at national level for providing inputs, markets and storage of farmers' crops.
- **Government Regulatory laws for crops marketing:** Government instituted laws for reulatina transportation and selling of crops.

Inputs (Q 5.2.1)

- Farm Yard Manure:** An organics fertiliser made on farm from animal dung. .
- Compost:** An organic fertiliser made on farm from decomposed plant materials.
- Insecticides:** This is the chemical usde in protecting plants or killing pests.
- Fungicides:** Protects plants from fungi attack.
- Herbicide:** Chemicals used to control or kills weeds.
- Improved seeds:** Scientifically attested to be suitable for agricultural use.

Questions specific definitions

Q 5.2.1. Instructions on crops storage:

1. For the listed crops establish whether or not the household stored crops for 2007/2008 agricultural season.
2. For the listed crops give explanations on storage.

Crops storage is keeping/reserving crops in a container or a special place for future use.

Q 5.2.1 Col 33

1. For each of crops listed indicate major marketing problems for 2007/2008 agricultural season.

Working area/calculation space

Definitions and working page for page 8

Permanent Crops:

These are crops once planted last longer in the farm and need not be replanted after each annual harvest. Most of the permanent plants include trees such as coconut trees, apple trees, grape trees, banana trees, pineapple trees etc.

Number of Trees:

These include mature trees and premature trees.

Number of mature plants:

A total of fruit bearing trees (e.g. mango trees, orange trees, avocado trees e.t.c).

Instructions for permanent monocrops and crop mix:

- A. For a field with permanent monocrop enter farm size in column 3.
 B. For a field with a permanent crop mix or a temporary crop mix, enter the number of trees only in column 4.
 C. For a field with a permanent crop mix /temporary annual crops, either:
 -Enter the area in column 4, if the total area for permanent crops was obtained through calculation of percentages of each crop
 OR
 Enter the number of tree in column 5, if the number of plants/ seedlings of permanent crops was excluded

21 Cassava: Cassava is a temporary crop, in order to simplify data collection on areas of production, data on cassava will be collected from areas under permanent crops.

Permanent crops:(crop oils)

Investment in agriculture

Investment activities:

Investment activities refer to medium to long term farm development structures and projects. This can be irrigation structures, erosion control and water harvesting structures or other permanent or semi-permanent investment made on the land that the household owns.

Irrigated farming: Section 6.5:

Source of irrigation water (Col 1): The main source of the water used for irrigation.

Method of obtaining water (Col 2): The mechanism by which the water is extracted from the source

Irrigatable area (Col 3): The area the irrigation system is designed to cover in acreage

Area of irrigated land during the 2007/08 (Col 5): Area of land under irrigation during the 2007/08 agricultural year. This is the actual area and NOT the cumulative areas recultivated in 2 or more cropping seasons.

Farm Implements (Col. 1):

Machette : Include all implements use in tree cutting namely cicle, etc.

Sprinkler: The pump carried on the back or a hand used water pump

Hand used small tractor: A small tractor used in cultivation while the user walks on foot (see photo).

Section 6.2 Use of draft animals

Animals used in agricultural activities by the household during 2007/08 agricultural season.

Castrated Bulls: Castrated oxen meant for use in agricultural production.

Uncastrated Bulls: mature bulls used for garicultrural activities but are not castrated.

Cow: Farmers also use mature female cattle in agricultural activities due to shortage of bulls

Donkey: Mature Male or female donekys are also used for agricultural production.

Q 6.5 Irrigation.

1. If a household uses irrigated farming give explanations on source and method of obtaining water. .

2. See Col 10, Q. 5.1.1 and 5.2.1 and Col 12, Q 5.3.1 to see if irrigation was applied to any crop.

Farm implements, Q 6.1:

1. Column 2 Indicate whether or not inputs were used

2. Complete column 3 by entering the number of inputs used.

Farm inputs: Sections 6.3 and 6.4

1. Column 2 Indicate whether or not inputs were used.

2. Complete column 3 by indicating where the inputs were obtained and column 4 by indicating the distance from where the inputs were obtained

Compost: An organic fertiliser made on farm from decomposed plant materials.

Insecticides: This is the chemical use in protecting plants or killing pests.

Fungicides: Protects plants from fungi attack.

Herbicide: Chemicals used to control or kills weeds.

Improved seeds: Scientifically attested to be suitable for agricultural use.

Q 6.6

The type of erosion contro/Water harvesting (Col 1)

Terraces: Structures constructed on mountain slopes to provide flat terrain for crop planting.

Erosion control bunds: these are bunks of earth/stones built perpendicular to the slope to slow down the speed of water and thus preventing soil erosion. Its differs from terraces in that the soils on these banks are not at ground level .

Gabions: A box like structure made of wire and filled with large stones to prevent gully erosion.

Sand bags: Are used in controlling and preventing gully erosion
Tree belt/wind breaks: Trees planted against the wind direction for breaking wind speed..

Section 7.0 Acces to credit for crop or livestock production

Credit refers to something provided in cash or in kind (such as farm inputs, machines, livestock and other things) for crop or livestock production. The value of the credit must be repaid back to the lender. An Interest may or may not be attached to the value of the credit

The credit may be repaid either in cash or through farm produce to be harvested .

In this question the enumerator is at liberty to inquire up to three sources of credit where the farmer accessed credit from more than one source.

Section 8.0 Agricultural Extension Services

Agricultural Extension Services: Refers to educational services provided to farmers by exetsion officers for the purposes of increasing crop and livestock production.

Share-cropping: Refers to farming where smallholder / Smallscale farmer enters into an agreement with large scale farmer where the former sells produce to the latter in exchange of provisions of farm inputs and the like. .

Contract farming Farming: Farming agreement entered between smallscale and large scale farmerswith regards to markets of farm produce and provision of farm inputs

Q 6.6 Number of water harvestin structures and year of construction

1. The number water haversting structures refers to the number of wokring / maintained structures and does not include derelict or iireparable structures.

2. Year of construction refers to the year in which the structures were built, and not the year the structures were last repaired.The year should be written in figures e.g. 1998, 2006.

Section 7.0 Source of agriculture credit

If tgher farmer obtained credit from more than one source the use the code from the list provided. Start with the main source of credit in Section "7.1.1".a

Section 8.0 Agricultural extension services

1. Ask if the household did receive agricultural extension services during 2007/08 agricultural season from the respondents listed in collumn 1, then enter column 2.

2. Complete all columns for every extension officer.

6.6 SOIL EROSION		Identification				
6.6.1 Did the household experience soil erosion during 2007/08 agriculture year? (Yes=1, No=2)		<input type="checkbox"/>				
6.6.2 Did the household applied any methods for erosion contro/water harvesting during 2007/08 agricultural year? (Yes=1, No =2) (If the answer is No, Proceed to Section 7.0)		<input type="checkbox"/>

Q 9.1 and 9.3 : What is required is to establish whether or not the household kept or raised the listed livestock during 2007/08 agricultural season (i.e. from October 2007 to September 2008). Also to establish the number of livestock as of 1st October 2008

Keeping or raising livestock is to keep livestock at home while providing the livestock with animal feeds and medication and other services. The livestock could be owned by the farmer or kept on behalf of relatives or neighbours .

Sections 9.1.1 to 9.1.7 Cattle

Note:

Q 9.1 is for the actual number of cattle owned or kept by the household (as of 1st October 2008). This number does not include herds of cattle kept on behalf by relatives or neighbours; that is, the cattle outside the residential area of the household under survey.

1. If the household keep mature fecund female cattle, it is expected that such a household will have calves which will be entered in question 9.1.6 or 9.1.7

Type of cattle (section 9.1.1 to 9.1.7)

Bull: Mature uncastrated male cattle used for breeding

Cow: Mature female cattle that has given birth at least once

Ox: Castrated male cattle used for farm work

Steer: Castrated male cattle used for meat

Heifer: Female cattle of 1 year up to the first calving

Section 9.3 Goat

Note:

Question 9.3 is for the actual number of owned or raised by the household (as of 1st October 2008) This number does not include goats kept on behalf by relatives or neighbours, that is the goat outside the residential area of the household under survey.

1. If the household has she goats, you would normally expect them to have kids

Type of Goat (Qs 9.3.1 to 9.3.5)

Billy Goat (he-goat): Mature Uncastrated male goat used for breeding

Castrated goat: Male goat that has been castrated

She Goat: Mature female goat over 9 months of age

9.0 LIVESTOCK (LIVESTOCK AND FISH)

Q 9.1 and 9.3 : What is required is to establish whether or not the household kept or raised the listed livestock during 2007/08 agricultural season (i.e. from October 2007 to September 2008). Also to establish the number of livestock as of 1st October 2008

Keeping or raising livestock is to keep livestock at home while providing the livestock with animal feeds and medication and other services. The livestock could be owned by the farmer or kept on behalf of relatives or neighbours .

Sections 9.4 Sheep

Note:

Q 9.4 is for the actual number of sheep owned or kept by the household (as of 1st October 2008). This number does not include sheep kept on behalf by relatives or neighbours; that is, the sheep outside the residential area of the household under survey.

1. If the household keep ewes, it is expected that such a household will have calves which will be entered in question 9.1.6 or 9.1.7

Type of Sheep (Section 9.4.1 to 9.4.5)

Ram: Mature Uncastrated male sheept used for breeding

Castrated sheep: Male sheep that has been castrated

Ewe: Mature female sheep over 9 months of age

Lamb: Young sheep under 9 months of age.

Section 9.5 Pigs

Note:

Question 9.3 is for the actual number of pigs owned or raised by the household (as of 1st October 2008). This number does not include pigs kept on behalf by relatives or neighbours, that is the cattle outside the residential area of the household under survey. .

1. If the household has she goats, you would normally expect them to have kids in column

Type of Pigs (Qs 9.5.1 to 9.5.5)

Boar: Mature Uncastrated male pig used for breeding

Sow: Mature female pig that has given birth to at least one litter of pigs.

Gilt: Female pig of over 3 months up to the first farrowing

Piglet: Young pig less than 3 months of age

NOTE : If answers to Qs 9.1 to 9.6 is No (THAT IS THE HOUSEHOLD DOES NOT RAISE LIVESTOCK,) Proceed to q.9.9

Definitions and working page for page 15

General definitions

Fish farming: Refers to the rearing/production of fish. It is different from fishing in that in fish farming the fish have to be reared. While in fishing, fishing nets or traps are used to catch fish from rivers, lakes and the sea; thus fishing should not be included in this section

I

Question Specific Definitions (Q 9.9)

Production unit number (Col 1): A production unit is a pond river/lake which is treated as a separate entity for the production of fish eg it may be by virtue of manageable size, maturity of fish, tye of fish etc. eg. a farmer may have 3 fish ponds (each one is a separate production unit).

Frequency of stocking (Col . 5): What is the number of time the farmer puts new fingerlings into the pond each year.

Fingerlings: These are young immature fish used for stocking ponds.

Sols: (Col 10 & 11)

If no fish were sold enter "0" in column 10 and 11`

Fish sold (Col.12)

Kama hakuna samaki waliouzwa jaza "0" katika safuwima 12

Definitions and working page for page 16**10.0 Household poverty indicators****Number of rooms used for sleeping in the household (Q 10.1.4)**

Include sitting room, dining room, kitchen, etc if used for sleeping.

It also includes rooms outside the main dwelling

A room is defined as a space which is separate from the rest of the building by a permanent wall or division. A building / house that is not divided into rooms is considered to have one room.

Household assets (Q 10.2):

These assets must be functional. Do not include if broken.

Access to drinking water (Q 10.4):

If there is more than one source use the one, which the hh uses most frequently.

Main source of hh cash income:(Q 10.7:

Activity that provides the hh with the most cash during 2007/08 agricultural season.

Definitions and working page for page 3

Question Specific Definitions:

Obtain answers to the following questions from the meeting between the enumerator and influential farmers in the village. Influential people can be Village Chairman, Village Government Executive Officer, Councillor, Ward Chairman, Extension Officer in the village or any other person in the village and who is well informed about village matters. It is important to not that these questions must be asked in groups (of more than one people) to obtain answers discussed and approved by many people.

Definitions of some specific terms

Access to community resources. Section 1.0
Community Resources: Resources in which the hh members have no individual claim to and which are shared together by all the village
Community Land: The area official demarcated by the village as shared/public land.
Squatting farmers Land: Communal land where individual hhs make sole claim to (for crop farming or fenced livestock) without official rights to ownership.
Available remaining Land: Official area of communal land minus areas of squatting farmers.
Government Land Reserve: Area set aside by the government as national reserve

Community tree planting scheme(Section 14.3)

Community Forest: A forest planted on the communal land which is planted, replanted or spt planted by the members of the village.
Plant Planting: An area designated by the village for planting a block of trees.
Spot Planted: Replanting an area where selective logging has been carried out. A tree is planted to replace the one that has been cut.
Indigenous Trees: Trees that are native to Tanzania
Exotic Trees: Trees that are not native to Tanzania

Non Government Organisation: Is managed by people from outside the village and it normally covers more than one village/District/R region. Its function is to provide deveopment assistance to the farmer and is free from direct government links.
Village level organization: is managed by members of the village. Its purpose is normally to access/provide development assistance to the village

1 ACCESS TO COMMUNITY RESOURCES									
1.1 Does the village set aside an area for communal resources e.g. forest, grazing, etc. (Yes=1 No=2) <input type="checkbox"/>									
<i>(If the answer is no proceed to 1.2)</i>									
Area of Community, Village, Ward resources					Area in acre				
1.1.1 Total area of communal land					<input type="text"/>				
Official figures from the leader									
1.1.2 Area of squatting farmers in communal land					<input type="text"/>				
Key informant (Leader/Extension officer etc.)									
1.1.3 Remaining available communal land					<input type="text"/>				
Key informant (Leader/Extension officer etc.)									
1.1.4 Government reserve land					<input type="text"/>				
Key informant (Leader/Extension officer etc.)									
1.2 UPATIKANAJI NA MATUMIZI YA MALIASILI ZA JUMUIYA/KIJI/SHEHIA									
Community Resources		Distance from the resource in Km -season			Main Use		Instructions on distance from the resource (Cols 2 and 3): Distance is estimated from the centre of the village. If under 1 km 1, enter 0 If above 1 km 1 enter whole number, eg. 1.5km= 2km, 1.25km= 1km		
(1)		Dry (2)	Rainy (3)		(4)				
1.2.1 Water for human consumption		<input type="text"/>	<input type="text"/>		<input type="text"/>		Main uses (Col. 4) Home or farm /livestock consumption...1 Sold to traders in the village.....2 Sold to the village market.....3 Sold to local wholesalers.....4 Sold to Big wholesalers.....5 Not available.....6		
1.2.2 Water for livestock		<input type="text"/>	<input type="text"/>		<input type="text"/>				
1.2.3 Communal grazing land		<input type="text"/>	<input type="text"/>		<input type="text"/>				
1.2.4 Communal firewood		<input type="text"/>	<input type="text"/>		<input type="text"/>				
1.2.5 Wood for charcoal burning		<input type="text"/>	<input type="text"/>		<input type="text"/>				
1.2.6 Wood for building poles		<input type="text"/>	<input type="text"/>		<input type="text"/>				
1.2.7 Forest for bee keeping (honey)		<input type="text"/>	<input type="text"/>		<input type="text"/>				
1.2.8 Hunting		<input type="text"/>	<input type="text"/>		<input type="text"/>				
1.2.9 Fishing		<input type="text"/>	<input type="text"/>		<input type="text"/>				
2.0 COMMUNITY PLANTED TREES									
2.1 Did your village have community planted trees during 2007/08 agriculture year? (Yes=1, No=2) <input type="checkbox"/>									
<i>If the answer is no proceed to Section 3.0</i>									
Details of the community tree planting scheme									
No.	Distance from the community forest	Forest Area (acre)	Type of Planting	Type of Trees	Source of seeds/ Seedlings	Number of Years since the start of planting	Main uses 2007/08 agriculture year	Main uses of communal forest products	
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	
2.2	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	
Type of planting (Col. 3) Plantation planting.....1 Spot planting.....2		Source of seedlings (Col. 5) Seeds collection and planting.....1 Village Nursery.....2 Department of Forestry.....3 Private Individuals.....4			Main Uses (Col. 7) Poles.....1 Wood.....2 Charcoal.....3 Firewood.....4 Other (Specify).....8		Main use of revenue (Col.8) Village development fund.1 Household use.....2 Household income.....3		
Type of trees (Col. 4) Indigenous trees.....1 Exotic tree.....2 Both types.....3									
3.0 Non governmental Organisation (NGOs) Contact					4.0 Community Based Organisation				
3.1 Did any NGO visit the village during 2007/08 agriculture year? (Yes=1, No=2) (If no proceed to Section 4)					4.1 Did the village have any CBO during the 2007/08 agriculture year? (Yes=1, No=2) <input type="checkbox"/>				
Na. Type of NGO		Visited Y=1, N=2	Number of visits	Distance to the Office (km)	Na. Type of CBO Nd=1, Hap=2				
3.2 Extension/ Rsearch		<input type="text"/>	<input type="text"/>	<input type="text"/>	4.2 Extension/ Rsearch <input type="checkbox"/>				
3.3 Service /input provision		<input type="text"/>	<input type="text"/>	<input type="text"/>	4.3 Service /input provision <input type="checkbox"/>				
3.4 Community Development		<input type="text"/>	<input type="text"/>	<input type="text"/>	4.4 Community Development <input type="checkbox"/>				
3.5 Other		<input type="text"/>	<input type="text"/>	<input type="text"/>	4.5 Other <input type="checkbox"/>				
5.1 Did the village have Field farm schools during 2007/08 agriculture year? (Yes=1, No=2) <input type="checkbox"/>					5.2 Did the village participate in any research on crops/ improved livestock during in the village during 2007/08 agriculture year? (Yes=1, No=2) <input type="checkbox"/>				
5.3 Did the village have local ironsmiths during 2007/08 agriculture year? (Yes=1, No=2) (If the answer is 2 proceed to q. 5.5) <input type="checkbox"/>					5.5 Did the village have any training centres on draft animals during 2007/08 agriculture year? (Yes=1, No=2) If number 2 is the answer conclude the enumeration. <input type="checkbox"/>				
5.4 Number of local ironsmiths <input type="text"/>					5.6 Number of training centres for draft animals <input type="text"/>
